HORTICULTURAL PROVIDERS.

751, OLD KENT ROAD,

LONDON, S.E.

In publishing a Revised Edition of our Catalogue of Horticultural Buildings, Garden Frames, Poultry Appliances, Rustic Work, Iron Buildings, Heating Apparatus, &c., we beg to tender our best thanks to the Nobility, Clergy, Gentry, Architects, Builders, Nurserymen, Seedsmen, Market, Professional, and Amateur Gardeners, and all who have favoured us with their patronage in the past, and we take this opportunity of assuring them, and the public generally, that our constant study will be directed to their interests by continuing to supply substantial articles at the lowest remunerative prices, by which means alone our own interests can be served. Since the issue of our previous list, considerable additions have been made to our works, some departments being doubled and trebled in size, both in space and machinery, which latter is of the latest and most perfect description; by these means, and aided by a large staff of skilled workmen, we are enabled to keep pace with the continually-increasing demand for our manufactures.

Our well-known portable Greenhouses and Conservatories (tenants' fixtures, no brick setting being necessary) are constructed in complete sections—the sides fixing to the ends with screws; the roofs made in proportionate parts, according to length of houses, and furnished with suitable ventilators; and every part is carefully marked before leaving our works, thus affording facility for erection by any handy man, no skilled knowledge being necessary.

Where any purchaser desires a House erected complete by our staff, our charges will be found reasonable within a wide radius of London; beyond distances quoted special prices will be given upon application.

Our Iron Buildings have been in use sufficiently long to put them to the test in every possible way, and from the continually increasing demand for them it may fairly be said that they justify a claim superior to any class of structure, for similar use, that existed prior to their introduction.

The Illustrations in this list show Elevations of a general character, but any deviations from the Designs can easily be made as desired, and special Drawings will be forwarded, together with Prices, upon receipt of Specification.

Several improvements, for which no extra charge is made, have been added to our Houses, a great variety of which are in stock and ready for immediate delivery. Any size not on hand, as also special sizes, can be placed on rail within three days from receipt of order.

The numerous unsolicited testimonials received afford ample proof of the quality of the work sent out, and it is very gratifying to know it has given so much satisfaction. We have appended a few extracts from the larger number of testimonials received. The originals can be seen at our offices.

EXTENSIONS AND REPAIRS.

We undertake these to any extent, and give Estimates for alterations of, or additions to, existing Houses and Heating π pparatus.

SURVEYS BY APPOINTMENT,

When any special designs are required we shall be pleased to let one of our Representatives wait upon Ladies or Gentlemen at their residences, in any part of the country, to take all necessary particulars, and we will then submit Designs and Estimates in accordance with his report.

HORTICULTURAL PROVIDERS.

Messrs. Cooper's Appliances.

Being in the neighbourhood of Old Kent Road the other day we called at No. 751 to look over Messrs. Cooper's premises, and were so delighted with what we saw that we think a short account of our visit will interest many of our readers, who must be conversant with their advertisement which appears regularly in our columns. Messrs. Cooper removed to their present premises some few years ago, and although we knew a pretty brisk business was being carried on, we had no idea of the extent of their work. Passing through their front office we entered their yards and workshops, which occupy five acres of ground, and where scores of men were as busy as bees. The engines were working merrily and kept dozens of machines going, cutting, slicing, planing, grooving, mortising and tenoning planks into the various shapes and sizes required, whilst the joiners, carpenters, and painters were deftly plying their various occupations. On enquiry we found that employment is given to some hundred and fifty men in the Amateur Greenhouse Department alone, and whilst each one is fully engaged, there was no rushing or pushing, each one apparently knowing exactly his own work and sticking steadily to it, irrespective of his next-door neighbour. In passing through the various parts of the Works we stopped every now and again to look on and handle some of the goods in course of construction, and were struck by their solid yet light make; certainly the workmanship all through, so far as could be judged by such casual observation and inspection, left nothing to be desired. We wondered how these goods were turned out so cheaply, but were not left long in doubt on seeing the immense stock of wood and glass that is always kept on hand. These purchases are made in very large quantities, and so can be bought at the cheapest rate. "Small profits and quick returns" is evidently Messrs. Cooper's motto. A tour round the premises reveals any number of greenhouses, forcing houses, propagators, stoves, boilers, garden lights, melon and cucumber frames, summer houses, poultry houses, coops, sitting boxes, pigeon houses, dog kennels, &c., both ready for sending away and in course of construction.

Believing that the turnover at such a place must be both large and quick, we ventured to ask for a few figures, which we give for the benefit of those interested. The average number of letters received daily is 750. During 1902 there were sent out, amongst other things, 9602 greenhouses, 16,798 garden lights, 1565 melon frames, and 3791 poultry houses. One house we entered was crammed with hundreds of boxes of glass of various sizes, and on remarking as to the large quantity, were assured it was small, and that 3500 boxes were then at the Docks waiting delivery.

HORTICULTURAL PROVIDERS.

There are generally in stock some 500 greenhouses, &c., and 700 poultry houses and appliances, so there is little or no delay in despatching orders. Mr. Cooper is a most energetic man indeed, and the life and soul of the whole business, and is well backed up by his manager Mr. G. Paul, to both of whom we are indebted for a very pleasant and a very instructive visit.—POULTRY, Feb. 24th,

Small Greenhouses.

I am thinking of building a small greenhouse, say 5 by 7, and shall be glad of your advice in the matter. I enclose a rough sketch of the garden: which would be best—a span-roof in position 2, or a lean-to in position 1? Also say the height in the centre and at the sides, and if the roof should be brought level with the staging, or side lights between the staging and roof. I should be glad of any other hints. I do not propose to heat the house.—A., Hornsey.

So far as aspect goes it is immaterial which position you choose, as both would get about an equal amount of sun, unless the lean-to were so near the dwelling as to be shaded by it during the afternoon. This we cannot gather from your sketch, as the distances are not indicated. However, we should prefer a span-roof at the end of the garden to a lean-to at the side. Are you proposing to build it yourself? If so, it is doubtful whether you will act wisely, unless you are experienced in the work. You will probably find it cost more, and give you less satisfaction, than if you purchase one of the small structures advertised by Messrs. Cooper. These are cheap and serve their purpose admirably. They are easily put together with screws, and if resting on a row of loose bricks are tenant's right fixtures. A house 7 by 5 feet (we presume this is what you mean) might be 7 feet high to the ridge and 4 feet to the eaves, having the stage about a foot below these. It could be boarded to the eaves. If you could have it 2 feet longer and a foot wider, with the same height to the ridge and eaves, you would have a very nice and useful house. Of course it would not be of much use in winter unless heated.]-Garden Work, Feb. 14.

HORTICULTURAL PROVIDERS.

Cheap Greenhouses.

EXTRACT FROM The Bazaar, DEC. 11th.

WE recently had an opportunity of inspecting the various Greenhouses made by Messrs. Cooper, of 751, Old Kent Road, London, and are pleased to be able to report favourably of them both as regards finish and price. Most of the houses are made portable—that is to say, so constructed as to be easily erected or taken down; and, as no brickwork is necessary, they are simply tenant's fixtures and removable at will—a point not to be lost sight of by persons residing in houses not their own property.

The Amateur's Forcing-house should prove just the thing for many amateurs and professional gardeners; for no brickwork setting is required, and the house, which is made in complete sections substantially constructed of red deal, can readily be erected by the purchaser, as all parts are carefully marked to show how they should be fitted together. These houses can be had in sizes varying from 7ft. long and 5ft. wide to 100ft. long and 10ft. wide, and at prices ranging from £2 10s. to £4 for the former, and from £45 to £65 for the latter.

Another Greenhouse which is specially worth the attention of amateurs, is the Amateur's Span-roof Greenhouse. Like the one previously noticed, the frame-work is of red deal, and the lower part filled in with tongued and grooved matchboards. It is a strong and inexpensive structure that can be fixed by any handy-man in a few hours. For this class of house of similar dimensions to those previously mentioned, the price varies from £2 16s. to £50.

Messrs. Cooper make a number of other very good and cheap houses, as well as one or two varieties of Garden-frames. One very useful kind is their Span-roof Garden-frame, to be had in sizes varying from 4ft. to 24ft., and at prices from £1 8s. to £8 10s.

A very good illustrated price-list of the various Frames, Greenhouses, &c., made by this firm, has been issued, and it will be found very useful to country readers. Those, however, who reside in or near London would find it worth their while to pay a visit to the Works and make their selection, as there is a very large stock from which to choose.

"Invincible" Hot-water Apparatus,

WILL Mr. W. P. Wright please say whether the "Invincible" Hotwater apparatus represented by Messrs. Cooper's advertisement is a good one for a small house?—S. B.

[Yes. This is an excellent boiler, and you would no doubt be quite satisfied with it. It is a broad boiler with a good fire base, with ashpit, stoking and feeding doors; has 4in. pipes and an expansion cistern.—W. P. W.]—Garden Work.

HORTICULTURAL PROVIDERS.

The Amateur Forcing House.

TENANT'S FIXTURE-LEAN-TO.

No. 1.

Wherever a Lean-to is required, this will be found an excellent House. It is offered at a very low rate, and as a tenant's fixture can

be easily removed.

SPECIFICATION.—Framework substantially constructed of red deal; the whole of sides, and 2ft. 6in. of ends, boarded with well-seasoned tongued and grooved matchboards; half-glass door, complete with rim lock and brass fittings, in one end; glass 16oz. throughout; ventilators supplied, according to size of House, and stays necessary for opening same; stages for plants entire length of House. All woodwork painted one coat of good oil paint, and the whole structure securely packed on rail, being carefully marked in readiness for erection, or delivered, erected and glazed, with extra coat of paint at Works, within 50 miles of London Bridge (beyond this distance special prices will be quoted upon application) at the following respective prices:—

Tarred Sleepers to erect this house on, 3d. per foot run.

HORTICULTURAL

Amateur Forcing House.

TENANT'S FIXTURE-SPAN ROOF.

No. 2.

The constantly increasing demand for Forcing Houses has caused special attention to be given to this class of house, both with regard to construction and economy. As shown in the above illustration, brickwork is entirely dispensed with, thus effecting a considerable saving.

It is suitable for both professional and amateur gardeners, and good

crops of cucumbers, tomatoes, melons, &c., can be grown.

SPECIFICATION. - Framework substantially constructed of red deal; the whole of sides and 2ft. 6in. of ends, boarded with wellseasoned tongued and grooved matchboards. Half-glass door, complete with rim lock and brass fittings in one end; glass 16oz. throughout; ventilators supplied according to size of house, and stays necessary for opening same; stages for plants each side of house. woodwork painted one coat of good oil paint, and the whole structure securely packed on rail (being carefully marked in readiness for erection), or delivered erected and glazed, with extra coat of paint at Works, within 50 miles of London Bridge, at the following respective prices (beyond this distance, special prices will be quoted on application):

21oz. Glass throughout, 10 per cent. extra. Tarred Sleepers to erect this house on, 3d. per foot run.

HORTICULTURAL PROVIDERS.

Amateur Lean-to Greenhouse.

TENANT'S FIXTURES.

No. 3.

This Greenhouse is substantially constructed, and can be fixed to any wall. As a tenant's fixture it can be easily removed at will, and being made in separate parts, all of which are marked, it can readily be put

together without skilled knowledge.

SPECIFICATION.—The framework is red deal, the lower part being filled in with good, sound, well-seasoned, tongued and grooved matchboards. The house is fitted with door, complete with rim lock and brass furniture, painted one coat of good oil colour, supplied with all necessary ironwork and stage for one side, and good 16oz. glass throughout. Securely packed on rail, or delivered, erected and glazed complete, with an extra coat of paint at Works, within 50 miles of London Bridge, at the following respective prices (beyond this distance special prices will be quoted on application):

When ordering, it should be stated at which end the door is required, when facing front of house from outside.

HORTICULTURAL PROVIDERS.

Span-Roof Conservatory with Pits.

No. 12.

This illustration shows a well-made Span-roof Conservatory, with Pits each side, placed in grounds away from the House; being exposed not only to view, but to the elements, it is so proportioned, both in substance and design, as to render it durable and effective.

SPECIFICATION.—The framework is of red deal, the lower part lined with tongued and grooved matchboards, as illustration.

The house is fitted with a half-glass door, complete with rim-lock, brass fittings, and key, and is supplied with lattice staging for each side; footpath the entire length; and side and roof ventilators, according to size, and necessary ironwork for opening same; gutters and downpipes. All woodwork painted two coats of good oil paint, good 21oz. glass throughout, and all parts securely packed on rail, being properly marked, or delivered, erected, and glazed, with an additional coat of paint after erecting, within 100 miles of London Bridge, at the following respective prices (beyond this distance special prices will be quoted on application):

Span-Roof Circular Light Conservatory.

TENANT'S FIXTURE.

No. 13.

This Conservatory is of ornamental design and artistic finish, and the materials employed in its construction are selected with the

greatest regard for substantiality.

SPECIFICATION.—The framework is made of thoroughly seasoned red deal, and the lower part is enclosed with diagonal panels, with tongued and grooved matchboards, lattice staging for plants on each side of the house; footpath the entire length. Gutters and downpipes. Ample ventilation on the most approved plan is given, according to the size of the house; rim-lock, with brass fittings and key for door; and all necessary ironwork and fittings provided, including 21oz. glass throughout, and carefully packed. Each house is made in sections; each part is carefully numbered, so that any handy person can fit it in a few hours. The whole of the woodwork is painted one coat good oil paint. Securely packed on rail, or delivered erected and glazed (with extra coat of good oil paint at works) within 50 miles of London Bridge, at the following respective prices (beyond this distance, special prices quoted on application):

Estimates for Stages, Footpath, Heating Apparatus, also for erecting Forcing Houses in any part of the country, free on application.

For Heating Apparatus suitable for above house, see Section

VII.

We undertake all Brickwork (in 9in. work) with necessary footings at 1s. 6d. per foot super, measuring from concrete, also door space.

HORTICULTURAL PROVIDERS.

Span-Roof Forcing House.

No. 16.

This illustration shows a Span-Roof Forcing House, the advantages of which are apparent where space will admit of its erection. It is indispensable to every grower of cucumbers, tomatoes, melons, &c., where a succession of crops are required in all seasons. Though cheap in construction, it is soundly built, and will repay its cost in a season.

SPECIFICATION.—Built for brickwork, 3ft. high; framework throughout 3in. by 2in. well-seasoned red deal; door complete, with lock, and brass furniture at one end; roof ventilation according to size, necessary ironwork for opening same, and good 2loz. glass throughout. House painted one coat good oil colour, carefully marked, and packed on rail at the following prices:—

HORTICULTURAL PROVIDERS.

Glazed Cover for Fruit Walls.

No. 35.

ADVANTAGES.

Complete Protection of trees from frost. Perfect Ventilation. Cheapness—will repay its cost in one season. Simple in Construction—can be fixed by any handy man. Ventilation is gained by means of the front sashes, all of which slide, thus also enabling the whole of the foliage to be syringed.

CONSTRUCTION.

The sashes slide in runners, and are entirely removable, the roof lights are supported on strong iron brackets bolted to wall. The framing is of good sound well-seasoned red deal, painted two coats best oil colour, carried on iron supports. Glass 2loz. throughout. All parts carefully marked before leaving Works, and can be fixed by any handy man.

The Cover—with Front Lights, Iron Supports, Roof Lights, and Brackets for a Wall 10ft. high—costs 9s. per foot run; Ends extra, 30s. each.

Securely packed on rail.

If less than up to 25 foot run is ordered, 10s. 6d. per foot.

"Sir,—The Greenhouse arrived quite safely, and am very pleased indeed with it, and consider it a wonderful house for the money, so strong and well made.—Yours truly, (Signed) Horatio Edenborougu (Capt.)."

"Dear Sir.—I received the glass in very good condition, and am well pleased both with that and the Conservatory. Having got it fitted together, I am well satisfied with it.—I am, Sir, yours truly, (Signed)

A. Stobbs."

"Dear Sir,—We got the Conservatory and Glass quite safe at Helsby, and no Glass broken. House gives every satisfaction. (Signed) G. Thompson."

HORTICULTURAL PROVIDERS.

Window Conservatories.

Either of these designs will make an elegant addition to the windows of gentlemen's Mansions and Villa Residences, and also exclude all draught from the windows, keeping the rooms warm and comfortable.

PRICES:

No.56.—Made whole and sent ready glazed with 21oz. glass, and painted three coats of best oil colour. Any size to order at 1s. 6d. per inch run.

No. 37 .- Made in sections, all fitted ready for erection on arrival. Glazed part 21oz. glass, and part tinted cathedral glass, and painted three coats of best oil colour. One casement in front hung and fitted with fastener (as illustrated). Any size to order at 3s. 6d. per inch run.

II. W. THOMPSON, Patent B. K. Works, Alreschurch, Worcester. "I am very pleased with the forcing house you supplied me with last year." Skeld, Sandsting, Shetland.

"DEAR SIR,—I have now received the Greenhouse and two boxes of glass. I am astonished to see how safe it has arrived here. The woodwork is not damaged in the least, and the glass is so little broken that I may say it has come here safe and sound. Whoever has packed the glass deserves credit, if you only knew the rough handling it had to get after it landed in Shetland ere it arrived here. I am well pleased with it all; it is a novelty here, as there is no other greenhouse in the locality. I wish to thank you for your prompt attention to my order. I and others are astonished to see such a good house for the money.—I remain, dear Sir, yours most faithfully,

WILLIAM COOPER, Esq.

HORTICULTURAL PROVIDERS.

Window Conservatory.

No. 38.

It is well and strongly made of best red deal, glazed with 21oz. glass, painted three coats, and is fitted with a set-open for opening the ventilating light provided at top.

PRICE.—Any size made to order at 1s. 3d. per inch run.

"Sir,—The Greenhouse we bought of you last September we have found to be quite satisfactory in every way, and consider it really good value for the money.—Yours faithfully, A. M. Dumas."

Willesbury, Brading, I.W.
"Sir,—Kennel and Bench received yesterday. I am quite satisfied with them.

G. F. DAYENPORT."

Greenhead, Low Bentham, Lancaster.

"Dear Sir,—The Lights arrived at the station to-day, and give every satisfaction.—I remain, yours, &c., JNO. CARR."

Radnoor, Holmbury St. Mary, Dorking.
"Sir,—Major-General Kincaid was well pleased with Greenhouse you sent him.—Yours, &c., H. Goodfer (Gardener)."

Leuten House, Leuten Street, Alton, Hants. "Dear Sir,-Lights to hand with satisfaction,-Yours, S. CHIEM."

HORTICULTURAL PROVIDERS.

The "Rapid" Propagator.

No. 39.

The only perfect Propagator for Raising Plants from Seeds, Slips, or Cuttings.

This Propagator is the best and cheapest now before the public, and will be found especially serviceable to amateurs and gardeners who require to strike cuttings and raise seeds in a short space of time.

One of these Propagators will raise large quantities of plants in the spring, thus—to a great extent—dispensing with the necessity of striking cuttings in the autumn, it being well known that many cuttings fall victims to the frost and damp atmosphere so prevalent in this country. This method of propagating saves the trouble and annoyance resulting from the loss of so many plants in the winter time, and also makes it unnecessary to occupy so much space in storing a large quantity of autumn cuttings.

The Propagators are composed of an outside casing with hinged glazed sash on top. The bed or bottom is formed of a tank, in which a constant circulation of hot water is kept up by the heater (see illustration), the pots being plunged in a bed of cocoanut fibre refuse, which should be kept moist. It is heated by oil, one pint of which will last 30 hours. Packed and put on rail complete at the following respective prices:—

Three-Quarter Span Garden Frame.

No. 47.

This frame was introduced a short time ago from a suggestion made by a celebrated grower of picotees and carnations. Its advantages are in height and light; the part span diffusing the sun's rays, while economy in space is effected. It is generally admitted to be without a rival in the trade.

SPECIFICATION.—It is made of 14in. sound red deal. The lights are 2in., and are glazed with good 21oz. glass, hung with iron hinges, and painted two coats of the best white lead paint. With set-opes complete. Securely packed on rail at the following prices:

Forcing Pits with Sliding Lights,

No. 51.

These Forcing Pits are usually constructed with long heavy lights running over into the path and monopolising double the width of the frame itself. In this design we have entirely done away with these difficulties, having arranged a double row of lights: the upper row slides down over the lower, and vice versa. Bearers are provided between each light, the latter being 2in. thick, and fitted with a handle. Sills are also provided for the wall. Painted two coats good oil colour, and glazed with 21oz. glass. All ready for fixing on brickwork on delivery.

Span-Roof Pit or Forcing Frame

Nc. 52.

These are perhaps the most useful form of Frame before the public, as they are suitable for the storage of plants in winter, and well adapted for growing cucumbers or melons, &c., in summer. For these purposes they are largely used by nurserymen and gardeners. Constructed for building upon brickwork, and made of well-seasoned redwood deal; all the lights are fitted with set-opes, which afford ample ventilation; the framework and lights are fitted and numbered before leaving the works, so that any handy man can fix them. Lights 2in. thick, painted two coats of best oil colour, and glazed with 21oz. glass, including ends. Carefully packed on rail.

HORTICULTURAL PROVIDERS.

Square Zinc Hand Frames.

With loose Tops.

These Frames will be found to be very useful for protecting plants, seeds, slips, or cuttings during the spring, which, if left uncovered, would probably fall victims to the extreme cold so prevalent in this country during that season.

The Frames are made of strong corrugated zinc, fitted with zinc clips for glazing same, no putty or solder being required; therefore the services of a glazier are not requisite for either fixing the glass or repairing, which can be accomplished by any inexperienced person. The glass can be removed instantly from one frame, and fixed to another of its size, without fear of breakage, glass being interchangeable.

This Ventilating Apparatus consists of 3in. tube, supported by carriages the entire length of greenhouse, having an elbow-lever for each Ventilator, and by the lever movement, with brass fittings at one end, the whole of the Ventilators in the roof or front, up to 50ft, in length, may be opened by one movement. In a long length it is necessary that the rods be securely pinned at the joints, and that the elbow-levers work freely upon their centres.

HORTICULTURAL PROVIDERS.

Amateur's Greenhouses.

Urged by the interest all amateurs take in the garden house question, a Garden Work representative recently called at Messrs. Cooper's establishment in the Old Kent Road, London, where, he had been informed, greenhouses were turned out by the thousand every year. What he saw confirmed all previous impressions as to the enormous demand for small greenhouses in general, and for those of Messrs. Cooper in particular. The Works are of considerable extent, but although only erected a very few years ago, they are already too small for the rapidly-growing trade, and are likely to be soon extended, an adjoining show-ground affording facilities for erecting fresh workshops. The latter are now in full activity. The greenhouse building trade has not so well marked a season as that of hot water apparatus, being in active operation the greater part of the year; but the present is an exceptionally busy time.

Two Hundred and Fifty Houses a Week represent an average number of the structures sent out in the busy season, and as many as fifty are frequently

of the structures sent out in the busy season, and as many as fifty are frequently sent out in a day. This wonderful rate is not, of course, maintained every week in the year; nevertheless, Messrs. Cooper claimed an annual output of 9,000 houses, and in the coming season they estimate, from the rapid growth of their trade, that the number will considerably exceed 10,000. This, the work of one firm alone, gives an idea of the number of small tenants' fixtures that are erected over the ready of the results of the number of small tenants' fixtures that are erected over the ready of the results of the number of small tenants' fixtures that are erected over the ready of the results of the number of small tenants' fixtures that are erected over the ready of the results of the number of small tenants' fixtures that are erected over the ready of the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures that are erected over the number of small tenants' fixtures are number of small tenants' fixtures are number of small tenants' fixtures are number of small tenan every year, and there can be no doubt whatever that the demand will continue annually, as amateurs find out what a vast amount of pleasure may be derived from a small house, and at what a comparatively trifling cost one can be procured. To speak of a Greenhouse at £2 17s. 6d. a few years ago one can be procured. To speak of a Greenhouse at £2 17s. 6d. a few years ago would perhaps have awakened a smile; but Messrs. Cooper supply as span-roof house 7ft. long, 5ft. wide, and 7ft. high, packed and placed on rail for that figure; and there is a cheaper one still at £2 10s. Where a pound or two more can be afforded, it is well worth paying it, in order to get a somewhat wider structure. Thus, a house 12ft. long, 8ft. wide. and 8ft. high, may be bought for £6, and it is an extremely useful size, affording space for a good amount of staging, with plenty of room for moving about. Two side stages, each 24ft. wide and 12ft. long, afford room for a large number of plants, and this would leave 3ft. for a central pathway. A lean-to of the same dimensions may be bought for a sovereign less. Another very serviceable type of house is a small tenants' right fixture suitable for forcing, and is supplied of house is a small tenants' right fixture suitable for forcing, and is supplied at corresponding rates; while those who want larger forcing houses for brickwork will find suitable structures offered for that purpose. Growers for profit will find this class of house very useful and economical. Conservatories of warious types and sizes are also built in large numbers.

Frames and Lights form a great feature of Messrs. Cooper's establishment.
The degrand for them is astanishing. In walking, through the works our

Frames and Lights form a great feature of Messis. Cooper's establishment. The demand for them is astonishing. In walking through the works our representative pointed to huge stacks of 6ft. by 4ft. frame lights, glazed and painted, ready for despatch, and inquired the price. They are quoted at 9s. each, unglazed 3s. 6d. each. They are cheap enough for anyone, one would think. Melon and cucumber frames and span-roof frames are also made and sold at a very low price. The system pursued, and by which the largest amount of work is turned out in the shortest time, is to have each section of the work done by songarda hands, some being employed as cutters. portion of the work done by separate hands, some being employed as cutters and others as fitters. A large number of men are necessarily employed, and and others as fitters. A large number of men are necessarily employed, and with orders flowing rapidly in they do not stand idle. Messrs. Cooper also have a large trade in glass; and **Heating Appliances** form a large department in themselves. Their "Invincible" heater—a fire boiler fitted with iron pipes and expansion syphon—was commented on recently; and they have other apparatuses heated by gas or oil. The Improved Hygienic heater, for the diffusion of hot air, and the Amateur's Assistant, which is fitted with 2in. or 3in. pipes and an expansion cistern, may be had to burn either oil or gas, and is in great demand.

As to whether cheapness is or is not allied with good quality in respect to As to whether cheapness is or is now affect with good quanty in respect to the glass structures turned out in such numbers by Messrs. Cooper, our representative saw nothing that would prompt any doubt in the matter. The materials employed appear to be thoroughly sound, and the workmanship materials employed appear to be thoroughly sound, and the workmanship materials employed appear to be thoroughly sound, and the workmanship materials another house he has made up his mind to go to Messrs. Cooper for it, and he is confident that he would be well served.-Garden Work.

HORTICULTURAL PROVIDERS.

Horticultural Building.

Extract from THE ILLUSTRATED CARPENTER AND BUILDER.

"Who loves a garden loves a greenhouse too," wrote the pious and pleasant poet, William Cowper, and the widest inductionbased at least on the experience of English humanity-irrefragably proves the soundness of the bard's aphorism. D In our changeable and frequently severe climate some kind of protection for the more tender offsprings of Flora, and even Pomona, is an Hence, from the tiny Wardian case in the inevitable necessity. window of the artisan in the smoky city to the acres of glass which roof the conservatories of a feudal magnate of the provinces. the constructor of horticultural edifices finds his skill continually called into requisition. Doubtless, many of our readers who visited the Annual Building Exhibition at the Agricultural Hall, London, have been unavoidably struck by the extensive and beautiful display of buildings of this nature shown by Messrs. Cooper. 751, Old Kent Road, London, S.E.

Amongst the useful specialities for the amateur horticulturist produced by Messrs. Cooper, our space will only permit us to allude to some which principally commended themselves to us.

First of these was the Amateur's Span-roof Greenhouse, an excellently-designed and beautifully-made structure of various sizes. These greenhouses are made especially for amateurs at a cheap rate, so that everybody can have one that any handy man or gardener can put together in a few hours, as the framework is made so complete. All the framework is of good, sound, well-seasoned red deal. The bottom part filled in with good, sound matchboards, tongued, grooved, and beaded, and well seasoned. Ventilation given according to size of each house. The glass is good 16oz., and carefully packed (no charge for packing cases) The house is painted one coat of good oil colour; lock for door, all necessary ironwork for ventilators, stages on each side for plants. All parts carefully marked before leaving works, securely packed, and put on rail, or delivered, erected, and glazed complete within twenty miles of London Bridge.

Next we would notice the Span-roof Villa Conservatory, made

like the preceding, in various sizes.

This house is very suitable for the lawn of a villa residence, being well and substantially built and constructed of the best materials, as per illustration, or with diagonal panels, made of well-seasoned, tongued and grooved boards. The framework is all made of 2in. by 3in. good, sound, well-seasoned red deal, and the roof is supplied with all necessary Ventilators, complete with

HORTICULTURAL PROVIDERS.

quadrants, cords, cleats, and pulleys for opening same, and by means of which they can be opened to extent desired. Ventilation given according to size. Lattice staging on each side, footpath, gutters, down-pipes, and all necessary ironwork. Rim lock, with brass fittings. All woodwork painted two coats.

Omitting any mention of the other horticultural buildings made by Messrs. Cooper, we will next notice the "Invincible" Hot Water Apparatus (tenant's fixture). Concerning this the manu-

facturer remarks:

"This is the simplest, cheapest, and most powerful hot-water apparatus made. The boiler stands in the greenhouse, the front only being outside and flush with the outer wall. It stands on the floor level, so that a sunk stokehole is not necessary. brick setting is required; a hole is simply made in the brick or boarded front of the greenhouse, and the boiler let in, thus forming a 'tenant's fixture.' The boiler being in the house, the whole of the heat from boiler itself being utilised. This heat, in a No. 1 size, is about equal to that from a 9ft. 4in. hot water pipe. Being stoked from the outside no fumes can enter the house, and it is perfectly safe from risk of fire. The pipe terminates in an open feed syphon, which takes the place of supply cistern, and only requires filling about twice a week. The joints to the hot water pipes are made with elastic rings, so that the whole of the apparatus can be fixed by any handy person, a hot-water fitter not being required. The boiler is remarkably economical in fuel, and will burn more than twelve hours without attention, thus entirely dispensing with night stoking."

Lastly, we would mention the "Amateur's Assistant," con-

cerning which the manufacturer remarks:-

"Considering the number of small greenhouses that do not require much more than sufficient heat to keep out the frost, I am induced to place before the public an entirely new hot-water apparatus, which will answer the purpose required (burning either gas or oil), at a very low price, free on rail, and consisting of the following, viz.: No. 1. A boiler made of strong metal plates, on my well-known patent principle, and fitted with a suitable lamp if to burn oil, or with atmospheric burner if to burn gas; 8ft. 2in. galvanised steel pipes (4ft. flow and 4ft. return), one feeder stand to receive the ends of the pipes, also for the purpose of filling; four india-rubber rings for joints to boiler and feeder,

HORTICULTURAL PROVIDERS.

A Horticultural Provider.

THE Old Kent Road owes a debt of gratitude to Mr. Albert Chevalier, who has given to it a notoriety peculiarly its own. But the popularity of this South London thoroughfare does not rest solely upon the refrain of the patter-singer; it has another claim to publicity, for the amateur horticulturist, at any rate, who is becoming to regard it as a familiar locality where greenhouse builders—particularly those of the size and style of house he affects—most do congregate.

Well down the road, towards New Cross, Mr. William Cooper established himself in business some years since, and during the several years that have intervened, he has found it necessary to successively enlarge his premises in order to meet the increasing demands of a rapidly developing business, until, at the present moment, he owns an extensive range of works, and employs a large number of assistants. The result, be it assumed, of keen business perception and enterprise, allied with a commendable perseverance that does him much credit.

A recent visit afforded an opportunity of inspecting the stock he has accumulated in anticipation of the season's trade, by this time, we believe, in progress. In one of the warehouses devoted to ready-made erections, were stacked the sides and ends of amateurs' houses of various sizes in lengthy rows, ready for dispatch immediately upon receipt of orders; and an immense number of lights, ready glazed, and spick and span with fresh paint, were waiting consignment. The amount of material used in the construction of these appliances must be enormous indeed, and visits to the painting shop and stores but confirm this impression. An advantage possessed by Mr. Cooper is his proximity to the Surrey Commercial Docks, which renders transit to his timber yard an easy and economical matter. He has a large timber yard, well piled with wood in baulks, in which the material is stored as imported.

There is quite a succession of light warehouses, where the various forms of rustic work, poultry appliances, wooden buildings, &c., are manufactured, each one having a department of its own; others, again, being devoted to garden sundries, glass, heating apparatus, &c., which form no small item in this comprehensive concern.

Space will not permit a detailed mention of other departments, for the horticultural provider has not overlooked minor details, such as, for instance, sawing mills, moulding machines, and a lofty shaft, of recent erection, which will rear its head aloft when other more fragile sky signs shall have coased to exist.—Amateur Gardening, Dec. 24.

HORTICULTURAL PROVIDERS.

Portable Stable and Coach and Harness House.

These structures are constructed of good strong materials throughout, the sides and ends being covered with tongued, grooved and beaded matching, on 3in. by 2in. selected deal. The roof is covered with stout boards on strong principals and covered with felt, and the buildings are supplied complete with partitions, doors, windows, all necessary ironmongery, and glass. All in sections in perfect readiness for erection, and securely packed on rail at the following respective prices:—

Constructed in sections in readiness for erection, and securely packed on rail. Three Boxes, size over all, 21ft. by 9ft., 9ft. high to ridge, and 6ft. 6in. high to eaves, £17 10s. 0d.

Quotation for other sizes, or Single Boxes, on receipt of full particulars.

HORTICULTURAL PROVIDERS.

Span-Roof Cow Houses.

These Houses are substantially built, the sides and ends being covered with 1in. tongued, grooved, and beaded matchboarding on strong 2in by 3in. frame. The roof is formed of stout boards on strong principals, and covered with felt; the houses are complete with doors and windows, and also partitions as shown, dividing it into loose box, fodder house, set in mangers, and feeder's walk. Constructed in sections in perfect readiness for erection, and securely packed on rail.

Size, 28ft. by 12ft., 11ft. to ridge, and 7ft. to eaves. PRICE £25.

Doors and Windows may be had in any position as required.

If Painted Outside with our Patent Rot-Proof Composition,

50s. extra.

Cooper's Disinfectas.

Clean, cheap and healthy; a little sprinkled about the cowhouse or stable give a clean appearance and pleasant smell.

TRY IT. Per Sack (2 bushel), 2s. 6d., sack included. 10 for 2s. 6d.

Send for Sample Sack.

HORTICULTURAL PROVIDERS.

No. 74.

The illustration here shows a most useful building for farmers. it being perfectly rat and vermin proof, and being constructed extra strong throughout will be found to be well suited for the purpose it is intended for; the roof is constructed of strong principals, boarded, and covered with felt, the sides of

matchboarding on strong framework; complete in sections in readiness for erection on ground level or piers at the following respective prices:

Léngth.	W .	idth	. 1	Heigh Rid	ge.	Heig			Ra

HORTICULTURAL PROVIDERS.

Poultry-Keeping.

In presenting to fanciers, breeders, and all interested in the successful rearing of poultry, our List of Houses, Runs, and Appliances, a few general remarks will not be out of place.

Situation of the Poultry-Yard.—It is difficult to lay down any hard-and-fast rules as to the site for a poultry-yard, as this must depend on what land is available for the purpose. A south or south-west aspect is desirable; at any rate, the place should be sheltered from keen winds. Poultry thrive apace, and pick up a good proportion of their own food, where a grass run is available, and this can be readily enclosed with wire

netting in order to prevent the birds from roaming.

Houses, Runs, and Coops.—Whether kept for exhibition, for egg-production, or for the table, it is imperative that fowls be properly housed; and the structure devoted to the purpose must be well ventilated without being draughty. Portable houses are strongly recommended by experts, especially where they can be kept in a dry field and moved from place to place where there are few or no trees, such as might entice the birds to roost in their branches. Some good types of houses and runs, and an assortment of coops of the most approved patterns, are shown in the following pages.

Varieties.—Dorkings, Plymouth Rocks, Scotch Greys, Silkies, Brahmas, and Cochins are considered by Prof. James Long to be the best sitters and mothers. The best layers are Hamburghs, Minorcas, Leghorns, Andalusians, Plymouth Rocks, and Houdans; while Spanish, La Flêche, Crèvecœurs, Minorcas, Andalusians, Houdans, and Langshans produce the largest eggs. Among the hardiest fowls are Plymouth Rocks, Langshans, Brahmas, Indian Game, Andalusians, Scotch Greys, Cochins, and Houdans. For size and weight, Dorkings, Cochins, Brahmas, and Langshans are recommended, and the Indian Game and Dorking cross

is acknowledged to produce the best quality table-fowl.

Food and Feeding.—The morning meal should consist of grain, such as crushed oats, or barley meal and sharps, mixed to a tough or crumbly consistency with hot water. It must not be sloppy; if it has been made too wet, dry it with pollard or bran. A second meal may be supplied at midday if thought desirable; but it should be sparse, varied, and well scattered abroad, so that the birds may find occupation in searching for it. Where a large grass run is available, no midday meal is necessary. The third and last feed, consisting of sound corn, should be given before the fowls retire to roost. Food should not be given in such abundance that it is left lying about. The birds require more hand-food in winter than in summer; and although they do not then lay so freely (taking a flock together)

HORTICULTURAL PROVIDERS.

yet the older pullets and the strongest of the young hens may generally be induced to lay with great regularity if fed from day to day with the object of encouraging them to do so. Table scraps and sheep's paunches are useful stimulating foods for winter. Fowls will not thrive unless provided with plenty of coarse grit or crushed oyster-shells to aid digestion (sand is useless for this purpose), and they must have a dust bath.

Prevention of Diseases .- The extreme importance of cleanliness cannot be too earnestly impressed upon all who keep birds. By means of the frequent use of our Disinfectas, which is cheap and clean, two bushels only costing 2s. 6d., many of the scourges of our poultry-yards may be kept at bay. In the case of disease manifesting itself, the patients should be promptly removed to a hospital (for which purpose a cheap lean-to house, such as that shown on page 110, is well adapted), so that other

healthy birds may not be infected.

Hatching and Rearing Chickens .- Birds intended for early breeding should be selected in December. Some breeders make a point of hatching their chickens for exhibition purposes as early as 1st January. In any case, early hatching is as valuable to the breeder for the table and the egg-producer as to the fancier: it enables them to obtain the high prices which rule in the early months of the season, and to rear a much larger number of birds than they would otherwise be able to do. The strongest of the two-year-old hens should be mated with an earlybred cockerel of the year. Plenty of hard corn must be provided for them, and a swede or mangold to peck at is desirable. The number of eggs given to a broody hen must be regulated by her size. She should be removed from the other fowls, and her nest made of straw. upon the ground, in a properly-constructed nestbox (see p. 137), if it is prepared in any other position, it should have a freshly-cut turf at the bottom. Feed the hen once a day with barley or barley-meal; give also clean water and a few blades of grass. Hatching commences on the evening of the twenty-first day. When, a few hours after hatching, the chicks are removed to a coop (see p. 139) give them finely-chopped egg (shell included) and skimmed milk. As they grow, this food may be varied considerably, and may include new milk, rice boiled in skim milk, boiled and chopped macaroni, and a little cooked meat, adding gradually to the dietary boiled and raw groats, broken wheat, and buckwheat. Barley-meal and ground oats, stiffly mixed, form a staple food throughout the bird's career. When the chicks are old enough to leave the hen, they should be provided with a suitable lodging, such as my Portable Chicken Coop and Run (see pp. 142 and 145). With suitable houses, well-bred birds, energy, and scrupulous cleanliness, poultry-keeping is not only a pleasing occupation, but also a source of considerable profit.

HORTICULTURAL PROVIDERS.

Our Poultry Appliance Department alone covers over 50,000ft. Floor Space.

HORTICULTURAL PROVIDERS.

"Peripage" Patent Incubators.

(Six Prize Medals awarded) have been before the public twenty years. Highest Awards Incubator Competition. Absolutely Reliable. Simple to Use. Hatch every possible Egg.

No. 89.

THE "PERIPAGE" INCUBATORS.

Carefully packed on rail at the following prices :-

No.	1, fo:	r 15	Hens'	Ear	O'SI			Co	with pper Tanks.

Crates for Packing, which we strongly recommend to prevent damage during transit, 1s., 2s., 3s., 5s., and 10s. respectively.

Plain, simple Instructions for Working, so that a child can manage, sent with every Incubator.

What they are and how they are made.

In the following description of our work we have endeavoured to be clear and concise, so as not to confuse any person with a lot

HORTICULTURAL PROVIDERS.

of "high-flown terms," (generally misapplied). We wish everyone to thoroughly understand what they are buying.

Cases

are of stout and well-seasoned timber of double thickness throughout, and by our special method of manufacture are stronger than any incubator sold. They are well finished and of excellent appearance.

Tanks

are all of best copper, with brass fittings. The flues are absolutely leakless, and thus the one great drawback that is so frequently found with Incubator Tanks is entirely removed. These leakless flues are our special patent, and no other maker can manufacture this form of Tank.

In practice, the results obtained from this Tank plainly shows its great value, because it radiates heat in such a manner as to give absolute uniformity of temperature over the entire surface of the egg-drawer, and the eggs in one place are not hotter than those in another.

If, through carelessness, the lamp-wick is turned up too high and made to smoke, the flue can be cleaned in a few moments by withdrawing a few screws and brushing out.

Drying Boxes

are not merely made for show, but for use, and are constructed so as always to remain at a good even temperature for drying-off chicks.

Regulation of Heat.

This is secured by a Thermostatic Capsule (patent applied for), which form of regulator has superseded all other methods. It is perfectly reliable and requires no attention.

Other Capsules have a tendency to expand between the centre stud and the outer edge, and do not regulate with that exactitude which is the great point in our Capsule.

It is by no means to be taken for granted that because an Incubator is fitted with a Capsule Regulator it is certain to work well. Rather than trust to a questionable regulator, it would be preferable to adjust the temperature of an Incubator by regulating the height of lamp-flame by hand.

When requested, we fit our improved Capsules to Incubators of other make than our own.

HORTICULTURAL PROVIDERS.

Do not hesitate to make any enquiries of this Incubator on any point that you may wish to know, or come and see the Incubators. They will bear the strictest investigation.

Note.-Never buy an Incubator with a Tin Tank, nor one having a Tank with flues that cannot be easily swept.

Fitted with best Copper Tanks with Leakless Flues, Improved Safety Lamps with Burners and Wicks, Thermostatic Capsule Regulators (patent appplied for), Sensitive English-made Thermometers, Glazed Top Drying Boxes, Evaporating Trays, Sets of Canvas for Egg Drawer, Water Trays, complete and ready for use.

With full Instructions for Hatching Goose, Turkey, Hen, Duck, or Pheasant Eggs.

Our Opinion of an Incubator.

An Incubator is (practically speaking) a machine that will hatch eggs. If a machine is poorly and faultily constructed it will only spoil eggs, and may fall to pieces after a season's use. If a machine is properly constructed, but is so complicated as to require a resident engineer to run it, it is no good to the busy farmer for hatching. People buy Incubators to make profit by them-not to use them as toys. To make profit by Incubators you want a machine that-

- 1. Is Simple to Work. 2. Economical to Use.
- 3. Will Last for Years. 4. Is Inexpensive. And above all,
 - 5. Produces the Largest Number of Healthy Chickens.

The "Peripage" Incubator has been designed to fulfil the above requirements. It is the outcome of years of practical experience and tests, and wherever used is appreciated, We are constantly receiving testimonials from all over the country thanking us for results obtained by our Incubators. people have said on reading our advertisements that they were afraid the machines were "too cheap to be good." When they have seen and used our Incubators, they have said they are "too good to be cheap."

"HATCHED EVERY EGG EXCEPT ONE."

"Gentlemen,—The Incubator arrived this morning, and I am much pleased with it. How you can possibly produce it at so low a price puzzles me. It is easily regulated, and quite up-to-date."

(Later.)

[&]quot;Gentlemen,—The first hatch of 'Wyandottes' has turned out well for your 200-Egg Incubator. With the exception of one, every fertile egg came off healthy and strong. On transference to the Foster Mother you sent me, the birds have gone on splendidly.—Yours truly.

(Signed)

ALAN SUTHERLAND, Head Gamekeeper."

HORTICULTURAL PROVIDERS.

"Peripage" Patent Hot-Water Rearer or Foster Mother.

No. 90.

Do not confound this with similar Hot-Air Rearers sold, and do not buy a Rearer that will kill your Chicks, and will fall to pieces after a month or two's wear.

Carefully packed on rail at the following prices:-

Chick Size.		Length.		Width. ft. in.		£ s.	d.
15	• • •	4		2 0	***	1 0	0
60		6	• • •	2 6		1 10	0
120		8	• • •	2 6	•••	2 10	0

This form of Hot-Water Rearer is very popular and convenient, and has been pronounced by Poultry Authorities the most perfect Rearer that has ever come under their notice.

The Sleeping Chamber, heated by a Hot-Water Tank (best Copper), is spacious and quite devoid of projections of any sort behind or under which the Chicks can be injured or left in the cold.

It is double cased, and has a double roof, the floor being raised

a few inches from the ground.

The Dormitory obtains light from the lamp fixed in outer run, and is also fitted with a shutter, so that Chicks can have light or be in darkness as is desired.

The fumes from lamp are directly conducted outside the Rearer, so that the air in both Sleeping Chamber and Runs is

always pure as well as warm.

The Run is fitted with wire netting of small mesh, and is also fitted for glass panes, so that in cold weather the Chicks can be protected from draughts, and the warm air can be kept in the Run.

104

HORTICULTURAL PROVIDERS.

"Peripage" Patent Hot-Water Rearer-continued.

In warm weather the glass can be partly or wholly removed, so as to give full access to the outer air.

It is constructed for indoor or outdoor use all the year round,

and is portable.

All parts can be very easily cleaned.

There are no corners for the Chicks to be crushed into.

It is airy in summer, yet will keep the Chicks warm during the coldest weather, and is absolutely storm-proof.

Chicks entrusted to this Rearer will thrive well, and always be

strong and healthy.

All parts are well and strongly made, and the whole is finished with one coat of good oil colour, and lime-whited inside.

Put Cooper's Disinfectas half-inch deep all over Sleeping Chamber before using, also sprinkle a little in Run. Per Sack (2-bushel), 2s. 6d.; 10 for 22s. 6d.

We subjoin

A FEW TESTIMONIALS.

as space will not admit of more.

"NO OTHER INCUBATOR CAN BEAT THIS RECORD."

Coast Guard Station, St. Alban's Head. "Dear Sirs,—I am pleased to inform you, out of fifty eggs put to hatch, forty-five chicks were hatched, and the other five eggs were unfertile. No other Incubator can beat this record. J. S. Badcock, Chief Boatman."

" GREATLY PLEASED WITH ALL THE (5) MACHINES."

125, Old Park Lane, Southport. "Dear Sir.—I may say that I am greatly pleased with all the Machines. They give me the greatest satisfaction.—Yours sincerely."

(Signed) H. Whitehead."

"A WONDERFUL MACHINE FOR THE MONEY."

Mill Poultry Farm, Shrewley. "Gentlemen,—I have received Incubator all right, and started it. consider it a wonderful machine for the money.—Yours faithfully.

(Signed) C. Bates."

"OUR WHOLE TOWN CAME OUT TO SEE YOUR INCUBATOR"

"Gentlemen,—We all like your 200-Egg Incubator very well. Our whole town came out to see your Incubator. I want one Foster Mother to order. Please let me know if we receive him in eight days' time. We can do lot of pusiness with you.—Yours truly,

P. Heems Kerk."

HORTICULTURAL PROVIDERS.

TESTIMONIALS—continued.

Read the opinion of J. H. SUTCLIFFE Esq., the eminent Authority on Poultry, and Incubator Expert (Author of "Artificial Incubation and it's Laws," &c., &c.), on the "Peripage" Incubator.

Felliscliffe, Ripley, Leeds. "DEAR SIRS,-We have had a very successful hatch from your machine, and I can confidently recommend it as a good hatcher, and excellent value for (Signed) J. II. SUTCLIFFE. money .- Yours faithfully,

"ITS SIMPLICITY."

To Mr. W. Cooper.

"Dear Sir.—Have received incubator duly and safely, and am very well pleased with it. Its simplicity of mechanism is splendid, and I believe from all appearances it will work easily and well. I thank you, and wish your honest and honourable endcavours success.—Yours truly, GEORGE BUTLER TAYLOR." (Signed)

" HATCHED EVERY EGG."

22, Lightwoods Road, Smethwick, near Birmingham.

"Dear Sir,—I think I ought to write and tell you that the Incubator I received of you four months ago is one of the best hatching machines in existence, as I have hatched every egg that was fertile with it. Trusting you will sell plenty of them, as I shall do all I can to push them for you.—Yours truly,

"Yours truly,"

"A LOT LESS TROUBLE THAN HENS."

"SIRS,-You will be glad to hear that the 100-Egg Incubator I purchased of you has been most successful in hatching strong healthy chickens. I never had a better lot of birds, and I am thoroughly satisfied that your Incubators are all you claim for them to be, and certainly a lot less trouble than hens,-Yours truly.

" HATCHED EVERY FERTILE EGQ."

"Gentlemen,—I have given the Incubator purchased from you a fair and impartial trial, and I consider it a very good Machine, and well worth the money. A child can manage it, and it has hatched every fertile egg.—Yours truly, (Signed)

"A CAPITAL THING"

Tree Dairy, Beverley. "GENTLEMEN,-Your Foster Mother is a capital thing. Not got up only for show, but a very useful article. GEO. JULIAN CHERRY.

"MORE THAN SATISFIED,"

12. Gee Street, St. Luke's. "Gentlemen,—I am more than satisfied with Hot Air Rearer; it gives G. BURNETT. perfect satisfaction.

"HOW YOU SELL IT FOR THE MONEY I CANNOT IMAGINE."

21 Ashford Road, Lower Tottenham. "DEAR SIRS,-It is with the greatest satisfaction I write to tell you your Incubator has hatched every fertile egg. How you can possibly sell it for the money I cannot imagine.

"I had heard that some of the very cheap Incubators advertised were no good, but I find yours is exactly what you claim it to be.

"Will recommend it to all my friends.—Yours faithfully,"

(Signed) G. BLEEZE."

HORTICULTURAL PROVIDERS.

Combination Fowl and Pigeon House.

No. 117.

This House will be found useful in both large and small establishments. Its compactness facilitates the keeping of several kinds of stock under easy management. The main body is constructed for Fowls, under which is a dry run. Above the Fowl House are compartments that may be used for other kinds of stock, such as Rabbits, etc., or they may be used as fatteningpens for Poultry. At the top is a Pigeon Loft, which will accommodate either three or six pairs of birds, according to the position the house is fixed in; if it stands away from a wall, extra chambers can be arranged at the back by inserting a division board—this would allow a depth of 1ft. 9in. for each of six pairs of pigeons. The Fowl house is supplied with ladder to raised floor, nest-boxes, perches, and all necessary fittings. Two doors, with locks, are hinged to the front of the house, and flap at the end for collecting eggs. The whole is strongly built in sections, and painted outside, ready for putting together. Portable for standing out in the open. Carefully packed on rail at the following prices:

Improved Range of Span-Roof Fowl Houses and Runs.

The above illustration shows a range of eight Houses and Runs, viz., four on each side; it has a passage-way 3ft. wide down the centre, by which attention to sanitary requirements is facilitated. The Houses are strongly constructed of good sound matching, the roofs being boarded and covered with felt; they have raised floors, thus affording a dry run for the fowls, and each House is fitted complete with nests, perches, and ladder. The Runs are formed of wood framing, covered with galvanised wire netting; each is fitted complete with gate. All outside woodwork painted with our Patent Rot-Proof Composition. Complete in sections, in perfect readiness for erection, and securely packed on rail. Size of each House, 6ft. by 5ft., 11ft. high to top of lantern, 6ft. high to eaves. Size of each Run, 10ft. by 6ft.; 6ft. high.

PRICE for eight Houses and Runs ... £30.

Double Pigeon House.

No. 175.

This is a Breeding-house for six pairs of pigeons. Each nest compartment has a door at the back, facilitating the inspection of the nest, and leading from the front of the nesting-chamber is a short flight which opens into the large flight as will be seen by the illustration. The arrangement admits of the birds being parted when desired for pairing off. The entire house is 12ft. long by 4ft. wide, strongly made and roof weather-boarded, stained and varnished, which lends an effective appearance to the construction.

OF

IRON BUILDINGS:

Churches, Chapels, Mission Rooms, Hospitals, Club Houses, Residences, Dwelling Houses, Cottages, Bungalows, Offices,

Stables, Coach-houses, Workshops, Boat-houses, Schools, Billiard Rooms, Concert and Drill Halls, Ball Rooms, Loose Boxes, Roofing, etc., etc.

The following Illustrations show Elevations of a general character, but any deviations from the designs can easily be made as desired, and special Drawings will be forwarded, together with Prices, upon receipt of Specification.

ALL BUILDINGS CONTRACTED FOR ARE PROMPTLY
FIXED IN A GIVEN TIME.

HORTICULTURAL PROVIDERS.

Description of Materials used in the Construction of Iron Buildings.

The County Council

demand to be employed in all buildings, materials of a sufficient substance and strength. ALL OUR WORK is in accordance with the necessary requirements.

Brickwork

is only necessary for foundations where buildings are erected within the Metropolitan districts. Outside the boundary we generally employ stone template, placing them under the weight-carrying supports of the building on the level ground. Foundations are not included in our estimates.

Frame-work

is of the following substances: Sleepers and joists, 4in. by 2in.; principal rafters, 5in. by 2in., 6in. by 2in., 7in. by 2in., 3in. by 6in., 2½in. by 7in., 3in. by 8in., and 3in. by 9in., according to width of house; framework 3in. by 2in., 4in. by 2in., and 3in. by 4in.; purlins 4in. by 2in. It is made in sections to faciliate both fixing and removal, which can be easily accomplished at any time at a minimum cost of labour.

Floor Boards

are supplied of thoroughly seasoned deal of tin. and lin. thicknesses.

Lining

is of thoroughly seasoned and selected matchboards of lin. and lin., tongued and grooved.

Exclusion of Draughts

is effected by a liberal use of felt in the walls and gables. We employ it in all buildings we erect. It has also the advantage of preserving an equable temperature.

Ventilation

is studied in every building, our principle being to thoroughly effect it without causing draught.

Galvanised Corrugated Iron

sheets of standard Birmingham gauge only are used. They are fixed on a principle that admits of their being easily released without damage to the structure.

Ornamental Finish

to gables and pinnacles is studied from the most approved Gothic designs.

206

HORTICULTURAL PROVIDERS.

Fittings and Glazings,

Locks, Bolts, Bars, Ventilating Gear, Gutters and Downpipes, and all Sundries are of the best make, and are carefully fixed. The Glass used in buildings quoted in this list is heavy 21oz.; but Rolled Plate, or Cathedral, or other qualities may be had at prices accordingly.

All County Council and other fees, if any, to be paid by the purchaser.

Erection Prices

include Delivery and Erection complete, Painting Outside Woodwork two coats best Oil Colour, and Staining and Varnishing Inside, Glazing Windows, &c., by our own men, all Railway Charges, Carriage, Men's Fares, Lodgings, &c., within 150 miles. Beyond this distance extra cost of Carriage, &c., will be charged.

On-Rail or Wharf Prices

include the building complete as above, ready for Erection, carefully marked and packed on Rail or delivered to London Wharf, and a drawing to facilitate erection supplied with each Building.

Deviations from the Designs.

The following Illustrations show Elevations of a general character, but any deviations from the Designs can easily be made as desired, and special drawings will be forwarded, together with Prices, upon receipt of Specification.

Increasing Demand.

Iron Buildings have been in use sufficiently long to put them to the test in every possible way, and from the continually increasing demand for them it may fairly be said that they justify a claim superior to any class of structure, for similar use, that existed prior to their introduction.

Neat in Appearance,

The advantages they possess are at once so apparent it hardly becomes necessary to point them out. On the ground of CLEANLINESS they have no equal. They are NEAT in appearance. The risk from FIRE is minimised, and from an ECONOMICAL POINT OF VIEW they are cheaper, commensurately, than any other form of temporary structures. With ordinary attention to the exterior, they will last a lifetime. All that is necessary for their preservation is to see they are painted, say, every three or four years. Where they are wanted to stand permanently, a four-course brick foundation is advisable. A Special Quotation for all Brickwork is given after a survey of the site, which is necessary, owing to the variation of soils and levels. It will, however, be found more expedient where brick foundation is wanted to entrust this to a local man, once having determined upon the capacity of the building to be placed upon it. Used as a Dwellinghouse, there is no necessity for waiting until the walls are dry before entering, inasmuch as no material used in the construction of the

HORTICULTURAL PROVIDERS.

Buildings is even damp, hence the readiness with which medical authorities resort to them for hospitals in cases of emergency. For those who take their pleasures up-river year by year, a portable building affords a means of enjoyment and change upon a scale of economy not found in any other system. We contract for every interior requisite, heating, lighting, cooking apparatus, furniture, &c., &c., whether required for the Church or the Gamekeeper's Cot.

EXPORT TRADE.—Buildings suitable for all Climates— The Colonies, South Africa, and India,

Great care is necessary, not only in the construction, but in the selection of materials for all Buildings required for use in foreign countries. The experience we have had in this department, combined with assistence rendered to us by old residents abroad, has enabled us to turn out work which has met the full appreciation of those for whom we have contracted.

For Tropical Climes

our Buildings are constructed with a double roof, each end being covered with perforated zinc in order to admit a through current of air. This not only assists to cool the interior, but may be made to act as a thorough ventilator.

Our Buildings are all made in Sections,

and tested as a whole, before leaving our Works. Each part is numbered and lettered to correspond with a diagram which accompanies the Building, so that reference is made easy, and the putting together of the sections is a matter of common intelligence, no technical skill being required.

Packing for Shipment

has the greatest attention, so that the parts may be protected from rough usage, consequent upon a long voyage and transhipments and carriage overland.

Portable and Tenants' Fixtures.

Being portable and tenants' fixtures, these Buildings commend themselves for service in all parts of the world. They can be enlarged or made small with comparative ease in any case of emergency.

If designs in this list do not meet with purchasers' requirements, Special Designs and Estimates will be promptly despatched on receipt of Rough Sketch and Particulars.

Special Designs Free.

HORTICULTURAL PROVIDERS.

Church.

No. 276.

Exclusive of fittings.

HORTICULTURAL PROVIDERS.

Sectional Interior View of No. 276.

Showing construction. This is a much admired and approved design, being in strict accordance with the rules of modern architecture.

Any Building not in stock, or special sizes, can be placed on rail within three days from receipt of order.

Packing for shipment has the greatest attention, so that the parts may be protected from rough usage consequent upon a long voyage and transhipments and carriage over land.

HORTICULTURAL PROVIDERS.

Church.

No. 277.

This design is of bold appearance, specially suited for large congregations, seating about 500 adults. Size, 70ft. long by 40ft. wide. Has Two Entrances. These, also Tower, can be placed in any position to suit purchaser. For Specification, see pages 206 and 207.

Delivered to nearest Goods Station, and erected complete on purchaser's foundation, £425; or marked for re-erection and bundled and packed on Rail or Wharf, £285.

Goldsithney.

"NEW MISSION ROOM.—St. James' Mission Room, in connection with the Church of England, and which is in South Rood, Goldsithney, is now completed. Considering the time taken (16 days), this structure reflects much credit on the contractors (Messrs. W. Cooper, London). The St. James' Mission Room is called after the ancient Church which formerly stood in Goldsithney, and which was built 502 years ago."—Vide Daily Press.

To Messrs. Cooper, Ltd. Chalk House, Green Farm, Elmer Green, Caversham. "Sirs,—Your man will have finished to-day (Wednesday), the Bungalow. Everything is finished perfectly satisfactory, and your Foreman has given me every satisfaction, &c. Should you care to refer anyone to me in the future as regards such a place they might be wanting, I would be glad to give Cooper's, Limited, a good testimonial.—I remain, yours truly, (Signed) H. W. Baker."

HORTICULTURAL PROVIDERS.

Church or Chapel.

No. 278.

This is a very neat design. Substantially constructed, very neat appearance, and well ventilated. Size, 70ft. long by 30ft. wide, 9ft. to eaves, 20ft. to ridge. For Specification, see pages 206 and 207.

Delivered to nearest Goods Station, and erected complete on purchaser's foundation, £265, or marked for re-erection and bundled and packed on Rail or Wharf, £160.

Any size made at proportionate prices.

Messrs. W. Cooper & Co. 101, Wellington Street, Luton.

[&]quot;DEAR SIRS,—The Trustees of the Wellington Street Baptist Chapel wish me to let you know that the building gives them every satisfaction, both in material and workmanship, and style of erection.—I am, yours, on behalf of the above,

⁽Signed) A. E. WITHAM."

[&]quot;DEAR SIRS,—Received Iron Building to day; very satisfied with it.—Yours truly,

(Signed) J. H. CARPENTER & Co.

HORTICULTURAL PROVIDERS.

It comprises Six Rooms and usual Domestic Offices; Two Bedrooms, 12ft. by 10ft.; One Bedroom, 9ft. by 12ft.; Dining Room, 15ft. by 12ft.; Sitting-room, 15ft. by 12ft.; Kitchen, 9ft. by 12ft; Scullery, Bath Room, and w.c. For Specification, see pages 206 and 207.

Delivered to nearest Goods Station and erected complete on purchaser's foundation, £175; or marked for re-erection and bundled and packed on Rail or Wharf, £110.

Ground Plan free on application. Main Building 35ft. by 28ft.

Buildings for Foreign Countries.

Great care is necessary, not only in the construction, but in the selection of materials for all buildings required for use in foreign countries. The experience we have had in this department, combined with assistance rendered to us by old residents abroad, has enabled us to turn out work which has met the full appreciation of those for whom we have contracted.

HORTICULTURAL PROVIDERS.

Dwelling House.

PLAN OF GROUND FLOOR.

PLAN OF FIRST FLOOR.

This is a Residence of a well-planned Design. It contains Drawing Room, Dining Room, Kitchen, three Bedrooms, Bath Room, and w.c. Having a verandah, gives it a handsome appearance. For Specification, see pages 206 and 207.

Delivered to nearest Goods Station and erected complete on purchaser's foundation, £250; or marked for re-erection and

bundled and packed on Rail or Wharf, £160.

Brick Chimneys, w.c. Fittings, and Stoves not included.

Portable Stoves supplied, prices on application.

HORTICULTURAL PROVIDERS

Bungalow.

No. 307.

Picturesque erection, with Verandah, for the Country or Seaside, 24ft. by 24ft. Built on a raised terrace it is particularly striking. Two Storied, with double Verandah, constructed with eight or more rooms, as desired.

Delivered to nearest Goods Station and erected complete on purchaser's foundation, as per Specification, pages 206 and 207, £350; or marked for re-erection and bundled and packed on Rail or Wharf, £250.

Other Sizes at Proportionate Prices.

Ground Plans free on Application.

Our Buildings are all made in Sections,

and tested as a whole before leaving our Works. Each part is numbered and lettered to correspond with a diagram which accompanies the Building, so that reference is made easy, and the putting together of the sections a matter of common intelligence, no technical skill being required.

Packing for shipment has the greatest attention, so that the parts may be protected from rough usage, consequent upon a long voyage, transhipments, and carriage overland.

HORTICULTURAL PROVIDERS.

Residence.

No. 308.

GROUND PLAN.

Handsomely designed Residence. For Specification, see pages 206 and 207.

Delivered to nearest Goods Station and erected complete on purchaser's foundation, £425; or marked for re-erection and bundled and packed on Rail or Wharf, £300.

Could be altered to suit purchaser's requirements.

Brick Chimneys, w.c. Fittings, and Stoves not included. Complete Estimate on application.

HORTICULTURAL PROVIDERS.

Residence for Hot Climate.

No. 309.

Specially Designed for Tropical Countries.

Every attention is given to suit the climate, and special requirements of purchasers. For full Specification, see pages 206 and 207.

Everything complete, packed, marked, and bundled ready for re-erection. Delivered London Docks, £375.

Full working Drawings, Plans, &c., sent with every Building.

Being Portable and Tenant's Fixtures.

these Buildings commend themselves for service in all parts of the world. They can be enlarged or made small with comparative ease in any case of emergency.

Ventilation

is studied in every building, our principle being to thoroughly effect it without causing draught.

HORTICULTURAL PROVIDERS.

African Merchant's Station.

No. 310.

SPECIALLY CONSTRUCTED FOR TROPICAL COUNTRIES.

Warehouse, Shop, and Residence combined. Everything complete, packed, marked, and bundled ready for re-erection. Delivered London Docks, £400. Every attention is given to suit the climate and special requirements of purchasers. For full Specification, see pages 206 and 207.

Full working Drawings, Plans, &c., sent with every Building.

For Tropical Climate.

For tropical climes our Buildings are constructed with a double roof, each end being covered with perforated zinc in order to admit a through current of air. This not only assists to cool the interior, but may be made to act as a thorough ventilator.

HORTICULTURAL PROVIDERS.

Workshop.

Lean-to.

No. 311.

Constructed of strong Wooden Framework, and covered with Galvanised Corrugated Iron Sheets. Not lined. Made in sections, and fitted ready for erection. Glass cut to sizes. Carefully packed on Rail or Wharf.

10ft. by 8ft., £7. 18ft. by 12ft., £14. 30ft. by 18ft., £30. 60ft. by 30ft., £60.

Doors and Windows can be placed in any position to suit purchaser's requirements.

Galvanised Corrugated Iron

sheets of standard Birmingham gauge only are used. They are fixed on a principle that admits of their being easily released without damage to the structure.

Iron Buildings

have been in use sufficiently long to put them to the test in every possible way, and from the continually increasing demand for them it may fairly be said that they justify a claim superior to any class of structure, for similar use, that existed prior to their introduction.

245

HORTICULTURAL PROVIDERS.

Workshop.

Span Roof.

No. 312.

Constructed of Galvanised Corrugated Iron Sheets upon strong Wooden Framework with floor. Complete, with Door, Glass, &c., and is made in sections and fitted ready for erection. Windows and Doors can be had in any position required. Carefully packed on rail.

249

HORTICULTURAL PROVIDERS.

Billiard Room, Club House, or Studio.

No. 316.

This is a very pretty design; having a bay window gives it a handsome appearance. Size of building, 25ft. long, 19ft. wide. For full Specification, see pages 206 and 207.

Delivered to nearest Goods Station, and erected complete on purchaser's foundation, £87 10s.; or marked for re-erection and bundled and packed on Rail or Wharf, £62 10s.

Bulldings Suitable for all Climates.

Great care is necessary, not only in the construction, but in the selection of materials for all Buildings required for use in foreign countries. The experience we have had in this department, combined with assistance rendered to us by old residents abroad, has enabled us to turn out work which has met the full appreciation of those for whom we have contracted.

For tropical climes our buildings are constructed with a double roof, each end being covered with perforated zinc in order to admit a through current of air. This not only assists to cool the interior, but may be made to act as a thorough ventilator.

HORTICULTURAL PROVIDERS.

Boathouse, Workshop, &c.

No. 317.

This design has been supplied by us to many boat owners, and has answered their purpose in every way. It is constructed of Galvanised Corrugated Iron Sheets upon Wooden Framework, no Lining or Floor. Carefully marked for re-erection, and bundled and packed on Rail or Wharf at the following prices:—

Doors and windows can be placed in any position.

Estimates for erecting on purchaser's foundation on application.

On-Rail or Wharf Prices

include the Building Complete as above, ready for erection, carefully marked and packed on Rail or delivered to London Wharf, and a drawing to facilitate erection supplied with each Building.

Superior to any Class of Structure.

Iron Buildings have been in use sufficiently long to put them to the test in every possible way, and from the continually increasing demand for them it may fairly be said that they justify a claim superior to any class of structure, for similar use, that existed prior to their introduction.

HORTICULTURAL PROVIDERS.

Portable Game Larder.

These Larders are invaluable to Sportsmen for storing game after killed; perfectly ventilated, and are necessary acquisitions for keeping game fresh. Complete on Wheels.

12ft. by 8ft. £15. Marked for re-erection, bundled, and packed on Rail or Wharf.

Refreshment

This is a very neat and useful Design, being constructed of Galvanised Corrugated Iron on strong Wooden Framework. The roof of the verandah is made to let down, and can be bolted inside, thus making it perfectly secure when left. No Floor or Lining included.

Made in Sections, marked for re-erection and bundled and

packed on Rail or Wharf.

10ft. by 8ft., £7 10s. 14ft. by 10ft., £11. 18ft. by 12ft., £16. 22ft. by 14ft., £22.

HORTICULTURAL PROVIDERS.

Ball Room, Drill, or Lecture Hall.

This is a very handsome design, and is suitable for a variety of purposes. For Specification, see pages 206 and 207.

Main Building 60ft. by 35ft., with 5ft. Verandah Front and

Sides.

Delivered to nearest Goods Station and erected complete. £275; or marked for re-erection and bundled and packed on Rail or Wharf, £185. These prices do not include any Band Stand, Counter, or Lavatory Fittings.

making a handsome dwelling.

HORTICULTURAL PROVIDERS.

Club House or School Room.

No. 322,

GROUND PLAN:

This design is very neat in appearance, and contains Club Room, Reading Room, Refreshment Room, Cloak Room, and Lavatory. For Specification, see pages 206 and 207.

Delivered to nearest Goods Station and erected complete upon purchaser's foundation, or marked for re-erection, bundled and packed on Rail or Wharf. 48ft. by 21ft. Erected Complete, £200; on Rail or Wharf, £140.

Position or number of rooms may be altered to suit purchaser's requirements.

Ornamental Finish

to gables and pinnacles is studied from the most approved Gothic designs.

HORTICULTURAL PROVIDERS.

Club House.

No. 323.

This handsome design is the result of careful consideration. It contains two Lavatories, Steward's Rooms, Billiard Room, Reading Room, Hall, and has a Stand on Roof. But the inside can be fitted or divided to suit any requirements. Plan on application. For Specification, see pages 206 and 207.

Delivered to nearest Goods Station and erected complete, or marked for re-erection, and bundled and packed on Rail or Wharf. 50ft. by 28ft. Erected Complete, £325; on Rail or Wharf, £210.

Ground plan free on application.

Floor Boards

are supplied of thoroughly seasoned deal of 3in. and 1in. thicknesses.

Lining

is of thoroughly seasoned and selected matchboards of in. and fin., tongued and grooved.

Ventilation

is studied in every building, our principle being to thoroughly effect it without causing draught.

WILLIAM GOOPER, Ltd, 751, Old Kent Rd, London, S.E. HORTICULTURAL PROVIDERS.

House.

No. 324.

GROUND PLAN.

This neat design contains two Lavatories, Gentlemen's Room, Ladies' Room, Bed Room, Kitchen, and Club Room. For Specifications, see pages 206 and 207.

Delivered to nearest Goods Station and erected complete upon purchaser's foundation; or marked for re-erection and bundled and packed on Rail or Wharf.

40ft. by 36ft. Erected complete, £225; on rail, £160.

HORTICULTURAL PROVIDERS.

Concert, Drill Hall, Ball Room, or Entertainment Hall.

No. 325.

Handsome Design, light and well ventilated. Upper portion of windows made to open, and every part substantially constructed from good sound materials only. For full Specification, see pages 206 and 207.

Delivered to nearest Goods Station, and erected complete on purchaser's foundation. 100ft. long by 60ft. wide, £650; or marked for erection, and bundled and packed on Rail or Wharf, £400.

Plans free. Any size made at proportionate prices.

Exclusion of Draughts

is effected by a liberal use of Felt in the walls and gables. We employ it in all buildings we erect. It has also the advantage of preserving an equable temperature.

Ventilation

is studied in every building, our principle being to thoroughly effect it without causing draught.

HORTICULTURAL PROVIDERS.

Promenade Shelter.

No. 326.

This new and handsome design seems to have met with great favour, as several have already been erected. It is constructed with Galvanised Corrugated Iron Roof upon Wooden Framework. The inside being Match-lined, Stained, and Varnished, and very strongly floored.

Delivered to nearest Goods Station, and erected complete upon purchaser's foundation, 30ft. by 16ft., £120; or marked and bundled ready for re-erection and packed on Rail or Wharf, £80

Frame-Work

is of the following substances: Sleepers and joists, 4in. by 2in.; principal rafters, 5in. by 2in., 6in. by 2in., 7in. by 2in., 3in. by 6in., 2½in. by 7in., 3in. by 8in., and 3in. by 9in., according to width of house; framework, 3in. by 2in., 4in. by 2in., and 3in. by 4in.; purlins, 4in. by 2in. It is made in sections to facilitate both fixing and removal, which can be easily accomplished at any time at a minimum cost of labour.

Floor Boards

are supplied of thoroughly seasoned deal of ain. and lin. thicknesses.

Lining

is of thoroughly seasoned and selected matchboards of ½in. and §in., tongued and grooved.

HORTICULTURAL PROVIDERS.

Cattle Shed, Store, or Barn.

No. 327.

This design is made to suit the requirements of Farmers, Agriculturists, &c. Also makes an ideal place for storing and warehousing goods. Constructed of galvanised corrugated iron sheets, upon very strongly made wooden framework.

Delivered to nearest Goods Station, and erected complete upon purchaser's foundation, or marked for re-erection and bundled and packed on Rail or Wharf.

50ft. by 30ft., Erected Complete, £115; on Rail or Wharf, £80.
60ft. by 35ft., , £155; , £100.
100ft. by 40ft., , £280; , £180.

These prices do not include any Floor or Lining.

Our Buildings are all made in sections

and tested as a whole, before leaving our Works. Each part is numbered and lettered to correspond with a diagram which accompanies the Building, so that reference is made easy, and the putting together of the sections is a matter of common intelligence, no technical skill being required.

HORTICULTURAL PROVIDERS.

Range of Sheds.

No. 328.

Specially adapted for Agriculturists, &c. Is very useful for stacking straw, grain, or hay. Centre house can be used as a Cattle Shed. Is constructed of galvanised corrugated iron, upon very strongly made wooden framework.

65, Merton Road, Wimbledon, Surrey.

"Dear Sir,—Kennel to hand all right yesterday, and I wish to say that I am very pleased with same. I like it far better than one I had from another firm about a month ago, and paid 5s. more than I paid you, and both Kennels are the same size (for collie dogs). You were also very quick indeed in delivering (day after order was given), whereas the other firm I refer to kept me waiting nearly a month, so you can guess who will have any future orders from me, and that will be you, and shall be only too pleased to put anything in your way which I can. Such business-like treatment deserves every encouragement.

"You can make what use you like of this, and, in addition, can refer anyone to me, and I'll show them the two kennels, and a blind man could see which was the best. With hest wishes.—Yours faithfully.

T. H. UPTON."

T. H. UPTON."

With best wishes .- Yours faithfully,

HORTICULTURAL PROVIDERS.

Improved Dog Kennel.

The superiority in manufacture of these Kennels has created a great demand for them. The best boards only, grooved and tongued, employed in construction, and they are rendered thoroughly rainproof. Painted one coat, or stained and varnished, as may be desired.

Portable Lean-to Dog Kennel,

This Lean-to House and Kennel is made of the best materials, being strong, yet light in appearance. Kennel, which is 2ft. 6in. high, is made with movable top, so that its height may easily be increased, if wanted, for a very large Dog. The house is 4ft. wide, and 3ft. 6in. back to front; the run is 6ft. long, 3ft. 6in. deep, and

fitted with gate. It is roofed with corrugated galvanised iron, but open iron bars can be had if desired over Run.

Corrugated galvanised iron, 2ft. wide, round bottom of Run or Yard, 7s. 6d. extra.

HORTICULTURAL PROVIDERS.

Dog Kennel with Covered Run.

This is a well-built substantial Kennel and Run, the roof to both Kennel and Run being covered with weather-boarding. The Kennel is provided with daybench over sleeping compartment. outside woodwork painted one coat. The Run is constructed of iron rods, and has gate at end.

Constructed in sections, and carefully packed on rail at the following respective prices:

Size 1. For Terriers £5. Kennel, 3ft. long, 3ft. 6in. wide, 4ft. high; Run, 5ft. long, 3ft. 6in. wide.

Size 2. For Retrievers and Spaniels £6 5s. Kennel, 3ft. 6in. long, 4ft. wide, 5ft. high; Run, 6ft. long, 4ft. wide. If wood spline floor for runs—Size 1, 15s. extra; size 2, £1 extra.

Dog Kennel and Run.

A good, strong Kennel and Run, constructed of good, sound, tongued and grooved matching, weatherboard roof; front of Run formed of iron rods; the whole complete with floor, all outside woodwork painted one coat, in sections in readiness for erection, at the following prices:

ESTIMATES ON APPLICATION.

HORTICULTURAL PROVIDERS.

Cooper's Improved Amateur Hygienic Heaters.

For Burning Paraffin Oil or Gas without Smoke or Smell.

These Stoves give off neither Smoke nor Smell, and will keep a Greenhouse from 15' to 40' above outside Temperature.

Portable and Complete. Nothing to Break. Fitted with Iron Chimneys.

CAREFULLY PACKED ON RAIL AT THE FOLLOWING PRICES:

Fitted with Duplex Burner.

No. 398.-18 by 25 by 10, will heat house 7ft. by 5ft., consumes i pint of oil in 10 hours, 15s. Extra for gas, 2s.

No. 399.—27 by 30 by 10, will heat house Eft. by 6ft., consumes 1 pint of oil in 10 hours, £1 2s. 6d., extra for gas, 2s.

No. 400.-32 by 30 by 10, will heat house 12ft. by 8ft., consumes 1½ pints of oil in 10 hours, £1 15s. Extra for gas, 3s.

These Heaters have been specially arranged as the result of long experience in connection with Heating Arrangements (generally and especially). The Amateur Heater has obtained and maintained a good position among all classes of Gardeners.

HORTICULTURAL PROVIDERS.

Hygienic Heaters-continued.

The object of the present improved Stove is to give increased heat in the upper part, hitherto not obtained, at the same time giving better results in supplying the flame by an easier upward current—a difficulty long felt, but now completely

No. 401. -34 by 30 by 10, will heat house 15ft. by 10ft., consumes 2 pints of oil in 10 hours, £2 10s, extra for gas, 5s.

No. 402.—28 by 32 by 13 (with one 4in. flat-wick burner), will heat house 20ft. by 10ft, consumes 2 pints of oil in 10 hours, £2 15s., extra for gas, 5s.

These Heaters are constructed as a means of heating by Hot Air without the These Heaters are constructed as a means of heating by Hot Air without the use of Hot Water or Fires. Its peculiar construction economises the Heat generated, so that there is no waste of Heat or Fuel. There being perfect combustion in this Stove and nothing whatever injurious to Plants, but actually everything conducive to their health, it should be observed that Plants may be had in full bloom throughout the severest Winter. This cannot be obtained in Stoves of other systems. The Temperature can be regulated to a nicety to suit all requirements, being raised 15° to 45° above that of the outside.

HORTICULTURAL PROVIDERS.

Hygienic Heaters-continued

One of the many features worthy of special notice is the portability of the Stove when in action, there being nothing to shake about. It can be taken from room to room with perfect ease. To maintain the required moisture, a pan or cistern is placed on the upper part of the Stove, for holding water.

No. 403.—33 by 32 by 13 (with two 4in. Flat-Wick Burners), will heat house 25ft. by 10ft.; consumes 4 pints of oil in 10 hours, £3 5s.

Nos. 400 and 401 are special High Power Heaters, fitted with good, powerful Burners, No. 402 with one 4in, Flat-Wick Burner, and No. 403 with two 4in, Flat-Wick Burner, Wick Burners.

Advantages of Cooper's Heater.—(1). Great economy in first cost, its price being one-half that of other systems. (2). Large economy and perfect simplicity of maintenance. (3). No chimney or pipe required. (4). Its peculiar form gives the largest amount of heat-radiating surface. (5). All Double Heaters can be used with one Lamp when required, by stopping up one flue with the Cap supplied. (6). The night pressure of Gas is controlled by the new Patent Governor Burner, burning only 3ft. of Gas per hour.

Instructions.—Keep the air-holes of the Burner free from dirt. When new cotton is used, it should be well dried and cut to the shape of the wick tube (this cotton is used, it should be well dried and cut to the shape of the wick tube (this can be done by removing the brass chimney holder, wiping will only be necessary afterwards). Do not turn it too high at first, and regulate before leaving it. When the pan at bottom requires emptying, remove the lamp and tilt the Heater up, being careful not to empty the contents over the plants. A piece of indiarubber tube of the required length is all the addition wanted to the Gas Heaters, to connect to the nearest pipe or tap. Should the Heater at any time require cleaning out (through turning the wick too high), remove it from the Greenhouse take away the lamps. According to the plants of the state of the content of the state of the sta time require cleaning out (through turning the wick too high), remove it from the Greenhouse, take away the lamps, &c., turn it upside down, and pour a quantity of water down the nozzle, then thoroughly shake about, so as to remove any soot that may have lodged in the barrels. After this, replace the Heater on its feet, and allow the liquid to run out at the bottom. When thoroughly drained, re-trim and light the lamp, and place beneath as usual, putting the Heater in some place where it can remain until the vapour from the interior has gone off, when it will be found to set, referrly. be found to act perfectly.

Market Place, Pontefract. "SIR,—After about two months' trial I am pleased to say that I am well sfied with your Hygienic Heater.—Yours truly, W. BRATLEY." satisfied with your Hygienic Heater.-Yours truly,

HORTICULTURAL PROVIDERS.

Cooper's "Reliable" Hot Water Boiler.

No. 404.

Requires no flue, and is easily moved from place to place. Made of best terne-coated iron sheets, which prevent rust. Should a moist atmosphere be required, remove either of the end caps. Always see that the tubes are full of water before lighting stove.

No. 1.—To heat House 7ft. by 5ft., two pipes and 4in. movable burner, £1 10s.

No. 3.—To heat House 12ft. by 8ft., four pipes and 2fin. movable burners, £2 14s.

No. 4.—To heat House 15ft. by 10ft., five pipes, and two 4in. movable burners, £3 10s.

Length of stoves, 4ft. 4in.

Will burn 14 to 15 hours with one filling.

Above prices on rail in London. Crates for packing same 2s. 6d. extra. (Not returnable.)

HORTICULTURAL PROVIDERS.

The "Invincible" Hot Water Apparatus.

Equal to any on the Market, both for Working and Material.

TENANT'S FIXTURE.

No. 405.

No. 400

THIS ILLUSTRATES THE WAY THE BOILER IS FIXED IN A GREENHOUSE.

We have sold on an average 1,500 of these Boilers every season for the last 15 years (this speaks for itself).

This is the simplest, cheapest, and most powerful Hot Water Apparatus made. The Boiler stands in the Greenhouse, the front only being outside and flush with the outer wall. It stands on the floor level, so that a sunk stoke-hole is not necessary. No brick setting is required—a hole is simply made in the brick or boarded front of the Greenhouse, and the boiler let in, thus forming a "Tenant's Fixture." The Boiler being in the house, the whole of the heat from same is utilised. This heat in a No. 1 size is about equal to that of 9ft. 4in. hot-water pipe. Being stoked from the outside no fumes can enter the house, and it is perfectly safe from risk of fire. The pipe terminates in an open-feed syphon, which takes the place of a supply cistern, and only requires filling about twice a week. The joints to the hot-water pipes are made with elastic rings, so that the whole of the apparatus can be fixed by any handy person, a hot-water fitter not being required. The Boiler is remarkably economical in fuel, and will burn more than 12 hours without attention, thus entirely dispensing with night stoking. The Boilers are made in six sizes; the dimensions, power, and prices are given below :-

Height.	Breadth. ft. in.	Depth. ft. in.	Capable of Heating	Price of Boiler only. £2 5 0
No. 1.—1 10 —	- 1 2 -	. 1 3	100 ft. ,,	- 4 0 0 5 15 0
32 3 -	_ 1 9	. 1 4	. 275 ft	8 0 0
,, 52 6 -	1 6 -	1 6	. 375 ft	12 0 0

These prices include two Sockets for pipes cast on Boiler flanges. Indiarubber Rings and Bolts for making Joints, Smoke Nozzle, Damper, Fire Bars and Ash-pit, and carefully packing on rail.

No. 423.

These boilers and stoves are made on an entirely new principle, and may be placed with perfect safety inside a conservatory, as from their construction there is an equal pressure of air on the inlet and outlet pipes, thus obviating the risk of a down draught, and at the same time effecting an enormous saving in cost of gas, as the heat from the boiler is retained in the house. The outer case of boiler is made airtight, and all the air for the supply of burner is drawn from the outside down the inlet pipe to the bottom of case, while the pipe for the escape of hot air is taken from the top, thus keeping up a "syphonic" action when in use, and maintaining the air pure in conservatory.

The burners swing out so that a lady can manage them.

N.B. All boilers are made right handed, and can be supplied reverse hand to that shown if desired.

Galvanized Cases for "Cooper" and "Invincible" Boilers.

For fixing outside conservatory, showing boiler, as fixed inside case.

No. 1. £1 10s. each. PRICE £1.

Galvanized Iron Pipe, For Outlet and Inlet.

For No. Boiler. 9d. 1s. 3d. 1s. 10d. perft.

When ordering boiler state amount of inlet and outlet pipe required, and add amount to cost of boiler, also if sockets are required left or right hand side of boiler when facing same.

12, Kyverdale Road, Stoke Newington, N. "DEAR SIR,-I received the little Hot Air Stove and am very pleased with it. Will you let me have another reservoir and burner.—Yours truly, (Signed) A. J. STATHAM."

41, Short Rows, Market St. Lane, Belper.
I am quite pleased with all.—Yours, &c..
(Signed) Mrs. Shaw."

HORTICULTURAL PROVIDERS.

The Amateur's Assistant.

Considering the number of small Greenhouses that do not require much more than sufficient heat to keep out the frost, and the numerous applications constantly received from Amateurs for a cheap and strong stove applicable to the purpose, we are induced to place before the public an entirely original Hot Water Apparatus that will raise the temperature from 15° to 45° above that of

the outside, requiring no attention, except to see that the oil vessel is kept supplied. No skilled labour is required for fixing, only to slip the rings over pipes, push into sockets, and fill up with either plaster of Paris, fire clay, or any cement. Securely packed on rail as follows :-

No. 1 .- A Boiler made of strong Metal Plates, on our well-known patent principle, and fitted with a suitable lamp, to burn oil or gas; 8ft. 2in., Galvanized pipes (4ft. flow and 4ft. return); One Feeder Stand to receive the ends of the pipes, also for the purpose of filling; Four India-rubber Rings for joints to boiler and feeder. Price 18s. complete.

No. 2.—Larger Boiler, 12ft. 2in., Galvanized Pipes, Feeder, Rings, &c. Price £1 5s. complete.

No. 3.—Still larger Boiler, 16ft. 2in., Galvanized Pipes, Feeder, Rings, &c. Price £1 15s. complete.

No. 4.—Complete with 24ft. 3in. piping, £3. Will heat 60ft. No. 5.—Complete with 30ft. 3in. piping, £5. Will heat 90ft.

ESTIMATES FOR LARGER SIZES FREE ON APPLICATION.

INSTRUCTIONS FOR FIXING THE AMATEUR'S ASSISTANT AND "RELIABLE" BOILER AND PIPES.

First, place the Boiler in the position it is intended to occupy; then connect the First, place the Boller in the position it is intended to occupy; then connect the water pipes to it by placing one of the indiarubber rings on the extreme end of each pipe, and forcing them into the sockets as far as they will go. The pipes are then to be connected to the elbows or feeder, as the case may be, in the same way, and the rings must be jammed or caulked in evenly all round the pipes. Then fill the apparatus with water through the **Feeder** at the end of the pipes, and when the water in the feeder is just above the level of the top pipe, light the lamp, keeping it low at first to allow the foul air and fumes to escape and create draught. Then you can turn the light up as high as may be required, without smoking. When the water in the pipes is hot enough, turn down the light, and by a little practice you will very soon know how to regulate the heat.

When the water in the pipes is hot enough, turn down the light, and by a little practice you will very soon know how to regulate the heat.

Do not under any circumstances allow the lamp to smoke, or you will fill the dome and conducting tubes full of soot, and the Boiler will not act. The lamp should be trimmed and re-filled about once in ten or twenty hours, as the case may be, and about once in a season the Boiler should be cleaned out. The same remarks apply also to Boilers burning Gas. When the Gas Boiler is placed inside the Greenhouse, the joints of gas-pipes must be made tight, to prevent the smallest leakage. The feeder must in all cases be higher than the Boiler in the proportion of lin, to every oft, of pipe, in length, or the water will not circulate properly. A mixture of red and white lead will stop any leak.

The pipes may be painted with lampblack and boiled linseed oil, to protect

The pipes may be painted with lampblack and boiled linseed oil, to protect

them from injury by damp.

The "Rapid" Propagator

No. 556.

The only perfect Propagator for Raising Plants from Seeds, Slips, or Cuttings.

This Propagator is the best and cheapest now before the public, and will be found especially serviceable to amateurs and gardeners who require to strike cuttings and raise seeds in a short space of time.

One of these Propagators will raise large quantities of plants in the spring, thus—to a great extent—dispensing with the necessity of striking cuttings in the autumn, it being well known that many cuttings fall victims to the frost and damp atmosphere so prevalent in this country. This method of propagating saves the trouble and annoyance resulting from the loss of so many plants in the winter time, and also makes it unnecessary to occupy so much space in storing a large quantity of autumn cuttings.

The Propagators are composed of an outside casing with hinged glazed sash on top. The bed or bottom is formed of a tank, in which a constant circulation of hot water is kept up by the heater (see illustration), the pots being plunged in a bed of cocoanut fibre refuse, which should be kept moist. It is heated by oil, one pint of which will last 30 hours. Packed and put on rail complete at the following respective prices:—

SECTION IX.

rice List

OF

Horticultural Manures, FERTILIZERS,

Insecticides, Worm Destroyers,

WEED DESTROYERS, SUNSHADES, Peats, &c., &c.

We have great pleasure in submitting to you our Revised Prices of Horticultural Manures, Sundries, &c., which will be found greatly reduced in prices, and, if tried, far superior to any other make. We have taken great pains in blending the various Manures to insure success, and they are now commanding a very great sale all over the Kingdom.

The system we have adopted enables our Manures to come within the reach of all classes, well knowing how essential it is to have a good Fertilizer for the production of strong, healthy plants and good bloom, and if our instructions are strictly adhered to they cannot fail to give satisfaction.

HORTICULTURAL PROVIDERS.

DR. A. B. GRIFFITHS, F.R.S.E.; F.O.S.;

Analytical Chemist and Assayer;

Consulting Chemist to National

Amateur Gardening Association;

Lecturer on Chemistry, Botany, etc.

12. KNOWLE ROAD,
BRIXTON, LONDON.

I herely certify that I have made a careful examination of the horticultural Manures supplied by M. William Cooper. They are undoubtedly first-class plant-foods for vegetables, flowers, and fruit trees.

A.B. Griffitho, Ph.D., 7.R.S.E., 7.C.S.; Anthor of "A Treatise on Manures", "The Diseases of Crops", "Manures and their Uses," etc.

HORTICULTURAL PROVIDERS.

William Cooper's General Fertilizer

FOR

FLORISTS, GARDENERS, AND AMATEURS.

This high-class Manure is strongly recommended, and for all kinds of Flowers, Fruit Trees, and Vegetables will be found invaluable, both for improving and increasing the Produce. Suitable for all Crops—Potatoes, Kitchen Garden Produce, Vine, Fruit Trees, Roses, Pot Plants, etc., etc.

Tins, 4d., post free 7d.; 7lb. Bags, 1s. 6d.; 14lb. Bags, 2s. 3d.; 28lb., 4s.; ½cwt., 7s.; 1cwt., 13s.

Directions for use with each package.

William Cooper's Chrysanthemum Powdered Manure.

This Manure, on its own merits, has come rapidly into extensive use. The materials it is composed of are of the highest manurial value, and so balanced as to combine immediate with lasting effects. It is a safe and certain Manure for Chrysanthemums.

Used by most of the leading Gardeners throughout the Country.

DIRECTIONS FOR USE.

FOR ORDINARY Use.—Every alternate watering, dissolve one ounce in a basin of hot water, and then mix the solution in three gallons of soft water; keep stirred, and apply slowly till the soil in the pots is well soaked.

FOR BEDDING AND OUTSIDE PLANTS use the same solution, after previously soaking the soil around the plants with clear water.

FOR EXTRA STRENGTH.—For Fruiting or Flowering Plants, as Tomatoes, Roses, Chrysanthemums, etc., use one ounce to two gallons of water.

PRICES: Tins, 6d., post free 9d.; 7lb. bags, 2s. 6d.; 14lb. bags, 4s. 6d.; 28lb. bags, 7s.; ½cwt. bags, 13s.; 1cwt. bags, 24s., on Rail.

Every practical Gardener always has a bag in store. No Amateur Gardener should be without it. An indispensable Manure to both Professional and Amateur Exhibitors. The best Chrysanthemum Fertilizer extant.

HORTICULTURAL PROVIDERS.

William Cooper's Insecticide

Is the Most Effective, the Safest, and the Cheapest Insect Destroyer.

One gallon of this Insecticide will make 200 gallons of efficient wash.

DIRECTIONS FOR USE.

Always shake the bottle before pouring out any of the contents. Use soft water only to dilute the Insecticide.

Strength of Solution.—For very tender succulent plants, \frac{1}{2} fluid ounce of Insecticide in 1 gallon water, or 1 teaspoonful in 2 pints. For less tender plants \frac{3}{4} ounce to 1 gallon, or 1 teaspoonful to 1\frac{1}{2} pints. For more hardy plants, 1 ounce to 1 gallon, or 1 teaspoonful to 1 pint. When the latter strength is exceeded it is well to proceed with caution, although many plants will be uninjured by a solution of 4 ounces to the gallon, a much weaker solution is fatal to most insect pests. In the case of scale and mealy-bug, however, the solution should be made rather stronger—1\frac{1}{2} to 2 ounces to the gallon, or more if the plant will bear it, and water at a temperature of about 80 deg. Fahr. should be used. Tender plants should always be well syringed with clean water about fifteen minutes after this solution has been applied.

When the Insecticide is to be applied by syringing, it will be found an advantage to dissolve some soft soap in the water before adding the Insecticide. This will make it wet the leaves and insects more thoroughly.

Fumicide - William Cooper's Vaporizing Compound.

For killing all kinds of Insects on plants in frames and greenhouses. The most effective method of fumigating ever manufactured. Easy to use. Perfectly safe. Success guaranteed. Will destroy Green and Black Fly, Thrip, Mealy Bug, Red Spider, &c., and is absolutely certain death to all Insect Pests. It will not damage the most tender plants. Cooper's Fumicide is sold in bottles.

No. 1 Size, 1oz. containing sufficient for 2,000 cubic feet 8,000 " 9d. post free. 2s. 6d. 6oz. 12,000 3s. 6d. i pint 2.0 20,000 68. 40,000 11s. 21s.

Fumigators suitable for using above, large enough for 5,000 cubic feet, 1s. 6d. each, post free.

Directions for use.—Close all doors, ventilators, &c., light the lamp, and place the cup containing the compound over it; then leave the house. The lamp will go out shortly after the compound has evaporated. For large houses use one Fumigator for every 5,000 cubic feet.

N.B.-Beware of Imitations. See that all LABELS on Cans, Tins. and Bottles bear this Signature, without which none are genuine.

HORTICULTURAL PROVIDERS.

William Cooper's Soap for Plants.

JUST THE THING THAT HAS BEEN WANTED.

By simply using the Soap with water and sponging the foliage, it destroys all insects, parasites, and fungus which infest plants, and gives the foliage a healthy and glossy appearance.

For room plants such as Palms, Aspidistras, Grevilleas, &c., &c., by washing them occasionally with this Soap, it will preserve and keep them in a healthy condition for a remarkably long time.

This is a Cheap and Reliable Insecticide.

Made in alb, Tablets.

1lb., 1s. 3lb., 2s. 6d. 7lb., 5s. post free. 28lb., 14s. 56lb., £1 7s. 6d. Cwt., £2 10s.

Used by most of the Leading Nurserymen throughout the Kingdom.

HORTICULTURAL PROVIDERS.

William Cooper's Unrivalled Weed Destroyer,

THE BEST AND CHEAPEST WEED KILLER IN EXISTENCE.

Maintains its superiority over all rivals for permanently destroying vegetation on Walks, Carriage Drives, Railway Stations, Ash Tennis Courts, Stonework grown green, &c., &c.

Used at Kew Gardens, Royal Horticultural Gardens, &c., &c.

COMPLETE SATISFACTION GUARANTEED to all using WEED KILLER bearing our TRADE MARK, without which none is genuine. REFUSE IMITATIONS. It will keep the weeds away for the whole season. May be applied with an ordinary watering can.

One Gallon as sold makes 25 Gallons for use, and is sufficient to treat 80 to 100 square yards.

Saves many times its cost in labour, and eradicates the weeds far more thoroughly than any hand-weeding.

1	Gallon		•••	1s.	Charge for Cans and Cas 6d. Can.
5	"	***	***	11d. per gallor	2s. "
10	99	***	***	10d. "	4s. ,,
20	99	***	•••	9d. "	4s. Cask.
40	99	***	100	8d. "	5s

Cans and Casks charged for at cost price, and are not returnable.

DIRECTIONS FOR USE.

The Weed Killer should be used in the evening, or early morning, when the weather is fine and settled. Each gallon should be well mixed with 25 gallons of water and applied with an ordinary watering can, sufficient being sprinkled to reach the roots of the weeds. To eradicate Dandelions, Plaintain, and lawn Weeds, apply a few drops of the mixture upon the centre of each plant.

SPECIAL CAUTION.—The Weed Killer is a poison and watering cans must be well rinsed after use.

This very successful Weed Killer proved to be most reliable (20 per cent. saved in labour). It is highly concentrated and lasting in its effect, is now largely used in the Royal Parks, Gardens, and Estates in the United Kingdom.

"IT BRIGHTENS THE GRAVEL WALKS."

William Cooper's Lawn Sand.

For destroying Daisies, Dandelions, and all Weeds on Lawns, and improving the growth and colour of the Grass.

In Tins, 6d., post free 9d.; 7lb. Bags, 2s. 6d.; 14lb. Bags, 4s. 6d.; 28lb. Bags, 7s.

HORTICULTURAL PROVIDERS.

William Cooper's Sunshade

SUPERSEDES ALL OTHER PREPARATIONS OF THE KIND.

The cheapest, most efficient, and convenient preparation for Shading Greenhouses, Conservatories, Glass Roofs, and Windows of all descriptions. It is applied cold—an enormous advantage over preparations requiring to be used whilst hot. May be used either inside or outside, and produces a pleasing effect. Is not washed off by rain, but can be instantly removed when desired by rubbing over with a brush whilst it is wet. Made in various colours—White, Pale Blue, and Pale Green.

DIRECTIONS FOR USE.

Mix the powder thoroughly with a little cold water till it is about the consistency of cream, then for each 1lb. of Powder used add 3 pints boiling water (it must be quite boiling or the mixture will be useless), stirring the mixture whilst you pour it in. Allow the mixture to cool. Again thoroughly stir, and apply with a suitable soft brush. It may either be spread smoothly and evenly over the glass, or "stippled," as it is called, by going over the freshly-painted surface with a flat brush, dabbing it carefully and evenly with the points of the bristles, so as to produce a frosted appearance. The effects of the work can be best seen from the inside of the house. If any part of it is unsatisfactory, wash it off, and go over it again when the glass is dry. The Shading should be applied in fine weather, and the glass should be clean and dry when it is put on.

Prices, in Tins.

1lb., 6d., post free, 9d.; 2lb., 1s., post free, 1s. 5d.; 7lb., 3s. 6d.; 14lb., 6s. 6d.; 28lb., 12s. 6d.; 56lb., 24s.; 112lb., 45s., or. Rail.

Cooper's Disinfectas.

Cheap, Clean, and Healthy. The best Disinfectant for Stables, Poultry Houses, &c. Try it. Per sack (2-bushel), 2s. 6d., sack included; 10 for 22s. 6d.

HORTICULTURAL PROVIDERS.

Certain Death to Insect Pests.

William Cooper's Fumigating Insecticide.

Destroys all insects infesting plants without injury to the Foliage, Fruit, or Flowers. Will be found to be the best and cheapest article yet introduced.

Two or three of these suspended by a wire under a greenhouse stage and lighted at each end, will quickly settle the accounts of the green fly and thrips, and that with comparatively little trouble; indeed, if a quantity of these are kept in readiness, a few plants may be put into a pit or small room and be cleaned; at least, have their insect pests destroyed in a very short time. When once lighted will burn till finished without further attention.

SUCCESS GUARANTEED

3d. each; 6 for 1s. 6d.; 2s. 9d. per doz.; 6 doz. 15s.; 28s. per gross.

Postage extra.

William Cooper's Worm Destroyer.

INVALUABLE for destroying Worms on TENNIS COURTS, CRICKET GROUNDS, BOWLING GREENS, and LAWNS, or removing them from the roots of Plants in Pots. The most certain, swift, economical, and safe remedy yet introduced. Will not injure the grass or the most delicate plant.

DIRECTIONS FOR USE.

Mix 2oz. of the Solution with 1 gallon of water, or in larger quantities, 1 pint with 10 gallons (= 1 in 80), and apply to the Lawn with an ordinary watering can in sufficient quantities to fairly saturate the ground. The worms will immediately come to the surface, and may be gathered into pails, or left to die and swept up with a broom. It is best applied in the evening when the ground is moist and the worms near the surface.

NOTICE.—This preparation is a POISON, and Poultry should not be allowed to eat the worms destroyed by it. The vessels in which it has been should be thoroughly washed after use.

Prices: In Bottles, 1 pint, ls.; 1 quart, ls. 6d.; ½ gallon, 2s. 6d. Can 6d.; 1 gallon, 4s., Can 8d.; 5 gallons, 3s. per gallon, Can 2s.

HORTICULTURAL PROVIDERS.

Cooper's Wonderful New Mushroom Spawn.

Complete satisfaction guaranteed to all using this brand of Spawn. The finest and most excellent quality procurable. Fresh and productive of abundant crops of Superior and Fleshy Mushrooms.

1 Bushel—16 Bricks 3s. 0d. 8 Bushels and upwards at 2s. 6d. per Bushel.

INSTRUCTIONS.

Mushrooms may be grown in a warm cellar or shed in winter, or in the open air in summer. Take partially dry, fresh horse manure and lay it in a heap to ferment, turn and mix it well every few days, and when well and equally fermented, which will be in from ten to fifteen days, it may be made into a bed four feet wide, and about two feet deep, mixing it well together and beating or treading it firmly. As soon as the temperature of the bed falls from 75 to 50 deg. the spawn may be inserted in

pieces about the size of a walnut, about 2in. deep, and 6in. apart. Cover with loamy soil about 2in. deep, and beat it down evenly and firmly, placing a Garden Mat over the bed. Water when necessary with lukewarm water, and expect Mushrooms in from four to six weeks.

William Cooper's Extra Special Manure.

THE WELL-KNOWN LAWN-TENNIS MANURE.

This Fertilizer speedily invigorates and propagates the growth of Grasses and Clovers. It also eradicates moss and weeds.

DIRECTIONS FOR USE.—To mowing Grass, Pasture, and Lawns, apply about 4lb. per 12 square yards, distributed broadcast, in the autumn or early spring, in showery weather. If seed is to be sown, it should be applied a week or two after the manure—not with it.

It is useless to distribute the manure on long grass, as it does not then reach the roots. A slight sprinkling of fine soil over the scattered

manure on a lawn will prevent any smell.

PRICES: Tins, 6d., post free 9d.; 7lb. bags, 2s. 6d.; 14lb. bags, 4s. 6d.; 28lb., 6s. 6d.; ½cwt., 12s.; 1cwt., £1 1s., on Rail.

Tobacco Paper.

This Paper is specially prepared by us of the Best Tobacco Juice, and does not require a Fumigator. By merely making a roll and suspending in house or frame, and then igniting both ends, it will cause a great smoke, and destroy all insects.

MOISTENS IN HEAT. HOLDS HEAT IN WINTER. Invaluable for Potting, Planting, Forcing, Decorating; and used on STRAWBERRY BEDS is preferable to straw, keeping the Fruit clear from grit, and at the same time nourishing the Plants. For lightening heavy soils it is particularly useful, and when the soil is light and dry it is of great advantage as a mulch. All slugs and insects are destroyed by its use.

Boxes 6d. and 1s.

N.B,-Beware of Imitations. See that all LABELS on Cans, Tins, and Bottles bear the Signature,

Without which none are genuine.

HORTICULTURAL PROVIDERS.

Cooper's Fluid Salts.

A highly concentrated form of an Effective, Simple, Safe, and Cheap Disinfectant. Non-poisonous. They are powerfully astringent, being rich in oxygen, which is the secret of their antiseptic value.

Before use it must be diluted with water in proportions as given below:—

For general use as a purifier for sick rooms, workshops, school-rooms, stable-yards, &c.—One tablespoonful to one gallon of water; to stand in open vessel or sprinkle about.

For water-closets, urinals, drains, sinks, sewers, cesspools, &c.— Two tablespoonfuls to one gallon of water. Either flush, pour over the surface of the soil and path, or use through a rosespouted can or garden syringe; any offensive smell will be at once removed.

For the bath.—One tablespoonful to three gallons of water will remove all impurities, invigorate the nerves, and afford a bracing effect to the system. Tender feet should be treated with a larger quantity.

For gargle and mouth-wash.—A few drops in a half-tumbler of water; it sweetens the mouth and breath, and cleanses the palate; purifies, and prevents tartar.

Mix a few drops with all water used for scrubbing floors, washing plates and dishes, saucepans, paintwork, &c.

PRICES.

lgal. 7s. 6d.; 2gals. 14s.; 3gals. 20s.; 5gals. 30s. Cans free.

Veterinary Uses of Cooper's Fluid Salts.

Glanders.—Two tablespoonfuls to a pint of warm water; syringe the nostrils; repeat at intervals of two hours.

Cow Pox.—One tablespoonful to a pint of water may be given internally; when eruption of the udder sets in, bathe or syringe the udder with the Salt, two tablespoonfuls to a quart of warm water.

Foot and Mouth Disease.—Use the Salts freely in this disease; wash the animal's mouth out frequently with two tablespoonfuls to a pint of cold water; syringe or bathe the eruption with nine parts of fluid Salt to one of warm water.

Sores of all kinds, abscess, canker, thrush, ulceration, broken knees, galled backs, chafed shoulders, mange in dogs and cats, &c., should be treated with the Salts; bathe or spray, three tablespoonfuls of fluid to a pint of warm water.

Patent Poultry Grit Crusher.

Do you wish to keep your Poultry in perfect health? Then use the Novelty of the age!

No. 656.

Saves time. Saves trouble. Saves annoyance. Saves expense. Crushes fine or coarse. Everlasting wear. Child labour only. Entire absence of danger to the eyes from flying chippings. The labour a pleasure.

Crush your own grit from your old crockery, glass, shell,

and other refuse. The best of grit.

Why buy grit when a child can crush in a few minutes all that is required—thereby keeping your poultry in health and increasing your egg supply? Why throw away your breakage refuse when you can put it to good account—thereby saving labour in disposing of it?

The above prices are based on market rates, and being cut fine are subject to fluctuations.

Our Oils are most highly spoken of, and their superior quality is admitted by large users throughout the Kingdom.

Special quotations for large quantities,

HORTICULTURAL PROVIDERS.

Lath Roller Greenhouse Blinds,

No. 667.

They are very durable. They are flexible and easily rolled up. They can be taken off and put on without difficulty. They can be left on during winter months as a protection against frost. The spaces between the laths admit the requisite amount of light. They are a protection against hailstorms, and are not blown about by the wind. The sun's rays are diffused, and pass in broken succession over the plants in a way most beneficial to them without burning the leaves.

PRICES: Best planed laths, painted two coats, and varnished, per foot super - - - - 7d. Best unplaned laths, not painted - - 5½d.

The above prices include the necessary lath roller, cord hooks, cleats, and pulleys.

These blinds are supplied up to 16ft. long; beyond this length it is advisable to have two. But special Prices will be quoted for any length. Part of one foot in the length charged as one foot.

All painted blinds supplied green unless otherwise ordered. Directions for Fixing and Arranging Pulleys and Cords.

Fasten the cord to ridge of house at Point A, take it beneath the blind and roller to Point B, up through pulleys Nos. 1 and 2, and down to Point C, within hand reach, then up through pulleys No. 3 and 4, over the blind to point D, under roller and up to point E, where it is again fastened.

In ordering, send Lath length required from end to end, and drop length from ridge to eave plate, or if required, blinds can be fixed under ventilators so as not to interfere with the opening or shutting of same.

The above prices do not include fixing.

Protector for Early Peas, Seeds, Plants, &c.

No. 670.

Here is a very useful arrangement to protect seeds, early peas, plants, &c., from bad weather and birds until well above ground. They consist of two slabs of wood, each 3ft. long (rabbeted for glass), 5in. deep, with strips fixed at each end to go down into ground. They may be placed

any distance apart, so as to take whatever size of glass available. Any number of slabs may be used according to length required. Painted with our Patent Rot-Proof Composition.

Per doz. Pairs of Sides (to cover 36ft. in length) ... 6s. 6d. Per gross Pairs of Sides £3.

One Pair of Ends included with each dozen Pairs of Sides. Extra ends, 6d. per Pair. Glass not included.

Sufficient 21oz. glass 7in. wide, 3s. 3d. per doz. pairs extra.

do. do. do. 35s. per gross.

Packing included.

HORTICULTURAL PROVIDERS.

Patent Double-Acting Semi-Rotary Wing-Pump.

This Pump is the result of long and continued trials, which have produced a system surpassing all others in durability, easy working, and simpleness of construction. The sizes 9, 10, and 11, when to be worked by hand, are provided with double levers. The wing only turning half way, and the spindle being well guided, the wear and tear of these Pumps is reduced to a minimum.

The Pump acts both as a Lift and as a Force Pump, and with the use of a Foot-Valve it sucks up to a height of 25ft.; the height of forcing may reach 110ft. If a Pump is fixed in a well, or has a greater length of suction than 4ft., a combined Holding-up Valve and Suction Rose is necessary.

All capacities stated in the following table are to be understood as made with a full stroke, with 3ft. suction and 3ft. forcing height.

These Wing Pumps are made of iron with brass wings, or entirely of brass or iron, in thirteen different sizes, for which the capacities and prices are given in the following table. Flanges up to No. 5 are oval, Nos. 6 to 11 circular.

To prevent bursting or bulging in frosty weather, see that the small Plug in the Face-plate is removed and Pump empticd by a few strokes of the lever.
